## ABSTRACT

The study examines the important of graceful element in a design e-commerce website. Graceful interaction is new concept in the human computer interaction (HCI) disciplines and it can improve the user computer engagement. This research aims to examine graceful element in e-commerce using eye tracking analysis. Whereby, the eye tracking can produce accurate data about the graceful interaction. This study adopts experimental method and use questionnaire, interview and eye tracker for data collection. The finding shows the user preference in the three combinations graceful elements which is FastOrderUp/Down. The result from eye tracking analysis shows the design e-commerce website through user experience preference. This study provides empirical findings to justify the importance of graceful interaction and better understanding about the graceful interaction in the design element.

## ACKNOWLEDGEMENT

"In the Name of Allah, the Most Gracious, the Most Merciful"

First of all, I would like to express my gratitude to Almighty God as for His Supremacy and Merciful led me the way to the completion of this thesis,. Using Eye Tracking to Examine Graceful Element in E-Commerce. Only after thorough hard work and practices that He has given me, this thesis could be done well with little limitations.

Upon completing this project, I would like to take this opportunity to express my deep gratitude to all people who have involved in assisting me completing this thesis.

My sincere appreciation goes to my main supervisor, Dr. Wan Adilah Wan Adnan, for her patience and wisdom given to me, and all the encouragement, guidance and feedback throughout the completion of this project.

Not to forget, my appreciation goes to my parents and siblings for all their blessing and prayers. I also would like to thanks to all my course mates for all the creative ideas and suggestion which had been very helpful. Thank you very much to all of you.
