**THE INVENTORY MANAGEMENT SYSTEM
USING RFID: REQUIREMENTS MANAGEMENT**

NOORYATI AHMAD

**Thesis submitted in fulfillment of the requirements for Bachelor of
Science (Hons) Information System Engineering Faculty of
Information Technology and Quantitative Science**

November 2008

ACKNOWLEDGEMENT

Although much time and effort were required in preparing this thesis, an important advantage is gained from this task, for the whole processes are often improved through the constructive criticism, comments, and suggestions from the proposal coordinators, Assoc. Prof Aishah Ahmad and Madam Wan Nor Amalina Wan Hariri, the thesis coordinators, Madam Jamaliah Taslim and Assoc. Prof Rashidah Rawi, also the supervisors, Mr. Syamsulhairi Yaakop and Dr. Ivan Lanovara Djafilus who had reviewed this thesis project.

An acceptable thesis is produced after considering the suggestions and critics given by the coordinators and supervisors who have read the earlier version of the thesis and after several modifications have been made. Creating a strong thesis is a very important skill in this project because it is the first step in formulating supportive arguments and materials. Besides that the researcher can also keep a project on track as this thesis acts as a roadmap for the project.

I would like to express my deepest thanks to my supervisors, Mr. Syamsulhairi Yaakop and Dr. Ivan Lanovara Djafilus for giving their full cooperation, advice, and guidelines towards the completion of this thesis. Not to be forgotten to the thesis committee who has provided suggestions and constructive comments given during consultation and thesis presentation. All of your suggestions and comments are highly appreciated.

And finally very special thanks to Operation Manager of Shakey's Pizza Sdn. Bhd., Mr. Ahmad Tajul Ruslee Termizi for giving the opportunity for me to conduct the interview session and also to my Head Programme, Miss Rosdiana Abd. Razak for her guidance in preparing the thesis.

Thank you.

ABSTRACT

The basis of this project was to examine requirements management criteria needed in producing the inventory management system and to understand and take advantage of the opportunities of RFID afford as mechanism towards better inventory management. The goal of this project is to improve the management of the conventional inventory system, by developing the computerized system with the involvement of RFID deployment. Interviews, magazines, articles, journals, books and outline documents are collected throughout the gathering of requirements and thus provide vital information to the project. The materials used to enable the capturing the present of items are RFID tags attached to items and RFID reader connected to the computer. The techniques are created in order to capture the items being tagged and store the necessary information of the items into database via the system. The overall approach was to keep track the availability of the items inside the inventory. The findings being presented are the details of the requirements gathered, the use cases, interface structures of the system and system interfaces, which contributed to the application of inventory management system. Upon completion of the project, it is found that the aspects identified in requirements management provide the basis in producing the inventory management system and the product of the project is system prototype which is being demonstrated. Future works for this system are focus on the RFID utilization and establish the stability of RFID connection with the system so it becomes more efficient, more effective and consistent. Besides, it is recommended to broaden the scope, enhancing the existing functionalities, adding new valuable elements to the system and improve the attractiveness of the system interfaces.

TABLE OF CONTENTS

APPROVAL	ii
DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	viii
LIST OF FIGURES	ix
LIST OF APPENDICES	xi
CHAPTER 1 – INTRODUCTION	1
1.0 Introduction	1
1.1 Research Background	2
1.2 Problem Statement	4
1.3 Objectives of Research	8
1.4 Significance of Research	9
1.5 Scope of Research	10
CHAPTER 2 – LITERATURE REVIEW	12
2.0 Introduction	12
2.1 Introduction to Inventory	13
2.1.1 Factors Affecting Inventory	14
2.1.2 Inventory Control	16
2.2 Technology Overview of RFID	16
2.2.1 Reading Characteristics	18
2.2.2 Frequencies and the EPC System	19
2.2.3 Applications	20
2.3 RFID Application to Inventory Management	21
2.4 Sample Case Studies of Inventory Management with RFID Deployment	24
2.5 Summary	38
CHAPTER 3 – RESEARCH APPROACH AND METHODOLOGY	40
3.0 Introduction	40
3.1 Justification of Choice of Methodology	41
3.2 Problem Identification and Planning	42
3.3 Requirement Gathering	44
3.3.1 Data Collection	44
3.3.1.1 Primary Data	45
3.3.1.2 Secondary Data	46
3.4 Requirement Analysis	48
3.5 Prototype	49
3.6 Hardware and Software Requirement Specification	50
3.7 Summary	52

CHAPTER 4 – ANALYSIS AND FINDINGS	53
4.0 Introduction	53
4.1 Requirements Analysis	54
4.2 Requirements Elicitation	54
4.2.1 Interview	55
4.2.2 Identify Actor of the System	65
4.2.3 Use Case Diagrams and Activity Diagrams	65
4.2.4 Graphical User Interface	77
4.2.4.1 Login Page	77
4.2.4.2 Main Menu Page	78
4.2.4.3 Security Setting Page	79
4.2.4.4 Add New Stock Page	81
4.2.4.5 Update Stock Page	83
4.2.4.6 Delete Stock Page	85
4.2.4.7 Find Stock Page	88
4.2.4.8 Reminder Page	90
4.2.4.9 Stock Report Page	91
4.3 Summary	93
CHAPTER 5 – CONCLUSION AND RECOMMENDATION	94
5.0 Introduction	94
5.1 Conclusion	94
5.2 Limitation	95
5.3 Recommendation	96
5.4 Summary	97
