## **ABSTRACT**

It is important for educators to be able to detect students' input through their output. To define output, it can be in the form of fulfilling the task given and based on the total score; educators nevertheless would be able to identify students ability in understanding certain topic taught. However, that would not be the only methodology in gauging students understanding. There are numbers of way and one of them is through multimodals.

Multimodal is defined as multiple forms of input and output such as language and expressed emotion. This research would be entirely based on the human behavior, focusing on the upper level, by understanding students' input ability through their facial displays such as gazing, yawning, random head-movement and so on, so forth. By the end of this research paper, educators would gain more knowledge on gauging students performance during lessons. Apart from the aforementioned benefit, also educators would be able to know which application technology suits for certain research. By so doing, educators not only know which application should be used but also on how to use and utilize the adopted device for this application domain.

## **ACKNOWLEDGEMENT**

First and foremost I would like to express my highest gratitude towards the Supreme Being for giving me strength, courage and above all the opportunity in performing and giving all my might in completing this humble research. Without your guidance, I would be like a boat floating on the sea, without direction as west and east appeared everywhere.

My deepest gratitude, goes to all people who have contributed to this research, especially to my supervisor, Puan Marina Binti Ismail, her knowledge and opinions in guiding me to complete this research. Associate Professor Dr. Nor Laila Md Nor for her professional guidance in methodology of conducting proper research. Endless prop to Mr. Rasyidi Radzi who tech edited the bulk of the text to get this document completed. Special thanks to my superior, Tuan Haji Shaari Bin Hussain, Pengetua MRSM Taiping for his understanding my situation in completing this study.

Also thanks to all my friends especially my husband Armizee Shah who always given support greatly towards this research. Not forgetting, my beloved parents, Tuan Hj Othman and Puan Hajjah Rohayah for their supports and understanding.

Last but not least, to all who always stood behind me and to those who are not, both are equally important in making this humble research.

# TABLE OF CONTENTS

Abstract	ii
Acknowledgements	iv
Table of Contents	v
List of Tables	vii
List of Figures	viii
List of Plates	ix
<b>Chapter 1 Introduction</b>	<b>1</b>
1.1 Statement of the problem	2
1.2 Research Question	3
1.3 Research Objective	3
<b>Chapter 2 Literature Review</b>	<b>4</b>
2.1 Expressing Emotion	4
2.2 Multimodal Behavior	4
2.3 Multimodal Framework	5
<b>Chapter 3 Methodology</b>	<b>8</b>
<b>Chapter 4 Data Analysis and Discussion</b>	<b>10</b>
4.1 Multimodal Human Behavior	10
4.1.1 Empirical Data 1: Data Collection	14
4.1.2 Empirical Data 2: Data Classification	16
4.1.3 Empirical Data 3: Data Observation	17
4.1.4 Empirical Data 4: Data Analyzation	20
4.2 Salient Multimodal For Formal Operational Stage	22
4.3 Multimodal Technologies	24
4.3.1 Technical Stages	24
4.3.2 Framing the Eyes Area	24
4.3.3 Multimodal Framework	25

4.3.4	Multimodal Software Technology Architecture	29
4.3.5	Multimodal Hardware	33
4.3.6	Head Gestures	34
4.3.7	Mechanism Used For Salient Multimodal	35
4.4	Benefit	36
<b>Chapter 5 Conclusion and Future Work Recommendation</b>		<b>37</b>
5.1	Challenges	37
5.2	Limitation	37
5.3	Conclusion	38
5.4	Future Work Recommendation	38
