ACKNOWLEDGEMENT

I would like to thank my lecturer, Assoc. Prof. Dr Noraliza Hamzah for her kindness and guidance from all aspects of this project. I also want to dedicate my gratitude to my advisor for her special guidance and inspiration and I want to deliver my deepest gratitude for facility office of Istana Budaya for giving required data for this project and thanks you to everyone who helps me directly or indirectly throughout implementation of this project.

ABSTRACT

In electrical system, there are various power quality disturbances such as harmonic, voltage sag, voltage swell, and transient which may lead to power quality problems and will give adverse effects to the electrical supply performance. In this project, the wavelet transform based artificial neural network classifier is implemented under two types signal disturbances namely transient distortion and voltage sag to improve the classification process of the signal. The feature extraction is done by using wavelet transform and the details are collected and given to the neural network. The fifth order of Daubechies wavelet with the decomposition at level four is implemented in order to get optimum wavelet decomposition. The features from wavelet transform analysis will be an input to the neural network and the output will be two types of disturbances namely voltage sag and transient. The accuracy level and the advantage of integrating the wavelet transform with neural network will be discussed in this project by analyzing the performance measures such as accuracy, precision, sensitivity and confusion matrix specificity. The rate of classification is perfectly with 100% accuracy for two types of power quality disturbance signals.

TABLE OF CONTENTS

CONTENT	PAGE
APPROVAL	iii
DECLARATION	iv
ACKNOWLEDGEMENT	v
ABSTRACT	vi
TABLE OF CONTENTS	vii
LIST OF FIGURES	x
LIST OF TABLES	xii
LIST OF SYMBOLS AND ABBREVIATIONS	xiii
CHAPTER 1: INTRODUCTION	1
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Objective	4
1.4 Significant of Project	4
1.5 Scope of Work	4
1.6 Project Overview	4
CHAPTER 2: LITERATURE REVIEW	6
2.0 Introduction	6
2.1 Types of Power Quality Disturbances	6
2.1.1 Transients	7
2.1.2 Voltage sag	8
2.2 Types of signal processing	9
2.2.1 Fourier Analysis	9
2.2.2 Fast Fourier Transform	10
2.2.3 Short-Time Fourier Transform	10

2.2.4	Multiresolution Analysis	11
2.2.5	Wavelet Analysis	11
2.3	Wavelet Transform	12
2.3.1	Introduction to Wavelet Transform	13
2.3.2	Discrete Wavelet Transform	15
2.3.3	Continuous Wavelet Transform	18
2.3.4	Daubechies Wavelet Families	19
2.4	Feature Extraction	20
2.5	Artificial Neural Network	20
2.5.1	The Biological Neural Networks	22
2.5.2	The Concepts of Multilayer Perceptron (MLP)	23
2.5.3	The Multilayer Feed Forward Network	24
2.5.4	The Levenberg Marquardt Algorithm	27
2.6	The Performance Measures	29
CHAPTER 3: METHODOLOGY		31
3.1	Data generation	31
3.2	Feature Extraction process	31
3.3	ANN modelling	33
3.4	Overall ANN Flowchart	34
3.4.1	Load Data	35
3.4.2	Normalization of Data	36
3.4.3	Split data	36
3.4.4	Optimization of Parameters	37
3.4.5	Best Regression and Training performance	41
3.4.6	Classification process	42
3.4.7	Performance Measures	45
