GAIN ENHANCEMENT OF CORPORATE FEED LINEAR ARRAY MICROSTRIP ANTENNA

MARDHIAH BINTI AWALLUDIN

Dissertation submitted in partial fulfilment of the requirements for the degree of

Master of Science In Telecommunication And Information Engineering

Faculty of Electrical Engineering

January 2013

ABSTRACT

In this paper 2.4 GHz corporate feed linear array microstrip antenna for point to point communication system is designed. The 2 by 8 corporate feed linear array antenna were designed, simulated with the aid of Computer Simulation Tool (Microwave Office Studio). After fabricated, the prototype antenna been measured. Stub matching technique was introduced to tune the required frequency that has been shifted in the measurement results of return loss to 2.4 GHz. The simulation results of radiation pattern produced high gain, 16.54 dB.

ACKNOWLEDGEMENTS

In the name of Allah, The Most Gracious and The Most Merciful. Praise is only to ALLAH S.W.T.

I would like to express my sincere gratitude to my supervisor, Prof. Madya Dr. Mohd. Tarmizi bin Ali for his endless support, ideas, motivation guidance and inspirations throughout the period of completing this project.

Last but not least, I would like to express my special thanks from the bottom of my heart to my husband, my beloved family, my fellow friends and individual involved directly or indirectly for their understanding, help, support and tireless effort throughout this crucial moment in my life.
