Dissertation submitted in partial fulfillment
of the requirements for the degree of
Master of Science

Faculty of Electrical Engineering

July 2014

ABSTRACT

There are 2 general objectives of Multiple Input Multiple Output transmission system; i.e. spatial multiplexing and spatial diversity. Diversity gain in MIMO is achieved by incorporating Space Time Block Code (STBC) in the transmission system. It is identified that there is lack of continuation from theoretical study of STBC towards its practical hardware design on MIMO testbed. It is desirable if more research area can be explored in experimenting STBC codes with different configuration such as decoding algorithm, modulation scheme, equalization technique, forward error correction and channel estimation. Many performance evaluation experiments can be conducted in real environment to investigate many schemes from practicality point of view. In this project, a fully orthogonal STBC namely, Alamouti codes is implemented on Polarizone MIMO Testbed platform for data encoding and RF transmission purposes. The Polarizone MIMO Testbed's system architecture is studied and the methodology to implement encoding system on the platform is proposed. The detail architecture and algorithmic state machines for important modules is explained in detail. Finally the system is executed on Polarizone MIMO Testbed and data acquisition is performed for system verification. The Alamouti Encoder is implemented on MIMO Testbed successfully and the system is proven to work in real environment.

ACKNOWLEDGEMENT

First of all, thank to Allah the Al-Mighty, the owner of all knowledge, who guided me and provided strength for me to finish this Master of Science program.

I would like to express my deepest gratitude to all lecturers in this program, whom I have learned a lot from, in all course works that I have gone through. A special thanks to my final project's supervisor Dr. Nur Idora Abdul Razak who had guided me throughout this project; starting from its conceptualization until its realization.

To all my course mates, especially to the people whom I had discussed on many topics in course work and projects, many thanks for your help and thought.

Finally, this dissertation is dedicated to all my family members for their continuous support and understanding. A deepest gratitude to my parents for their supplication and support during my two and a half year journey in this program. My heartfelt thanks to my beloved wife, Zalina Mat Ali, for her understandings, support and effort in attending many family related matters when I was not available. Thank you to my children, Muhammad Afiq, Muhammad Adib, Nur Anis Zahidah, Nur Auni Zahirah and Nur Amni Zafirah for their understanding when I was always busy attending weekend classes starting from December 2011 until July 2014.

TABLE OF CONTENTS

CONFIRMATION BY PANEL OF EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
LIST OF TABLES	vi
LIST OF FIGURES	vii
TABLE OF CONTENTS	viii
CHAPTER ONE INTRODUCTION	1
1.1 Overview	1
1.2 Problem Statement	5
1.3 Project Objective	6
CHAPTER TWO LITERATURE REVIEW	8
2.1 Overview	8
2.2 Previous Work on Theoretical Study	8
2.3 Previous Work on Design and Experiment	10
2.4 Summary	12

CHAPTER THREE RESEARCH METHODOLOGY	14
3.1 Overview	14
3.2 Feasibility Study on Polarizone High Performance SDR MIMO 4x4 Platform	14
3.3 Process and Methodology	22
3.4 Tools	25
3.5 16-QAM Alamouti Encoder Design	26
3.5.1 Theory from Implementation Perspective	26
3.5.2 Register Transfer Level (RTL) Design	29
CHAPTER FOUR RESULT AND DISCUSSION	35
4.1 Overview	35
4.2 RTL Simulation and Verification	36
4.3 Testbed Execution and Verification	39
4.4 Waveform Design at Transmitter	42
4.5 Future Work	43
4.5.1 Decoder Design	43
4.5.2 Extending to Other Types of Encoding System	45
4.5.3 Signal Constellation Analysis	45
4.5.4 External Interface	46
CHAPTER FIVE CONCLUSION	47
