## ABSTRACT

Wireless telecommunications have developed extremely over the previous decade, wireless LAN and telephones mobile have been the key reasons for the development. Faster wireless communications had been demanded as this will allow a new applications expanded such as widespread wireless broadband Internet access. Multiple antennas at the transmitter and receiver such as multi antenna transmission schemes, have been proposed as an approach to accomplish the demand for better capacity. This design are mostly outstanding because it do not need any extra transmission bandwidth, compare to traditional systems which use multipath interference for it benefit. The aim of this project is to implement a particular two antenna scheme, of Alamouti code, on a Field Programmable Gate Array (FPGA) testbed board developed by the Polarizone. At the time of writing, designs have been created for the encoding part of a MIMO system. The designs have been verified by comparison result using ISIM tools for hdl simulation and actual waveform acquired from Chipscope Pro Analyzer. This research focusing on implementation of actual experiments of FPGA board for analysis of multiple input multiple outputs (MIMO) on Space Time Block Code (STBC) scheme. Current research show that STBC is efficient to decrease the distortion effect in transmission system by provide diversity. STBC is known as a technique to transmit redundancy signal through multiple antenna and received various signal data with consistency of data transfer. Modulation scheme of 16 PSK for two number of transmitting antenna is implemented.

## ACKNOWLEDGEMENT

BISMILLAH HIRRAHMAN NIRRAHIM, in the name of ALLAH, of the Most Gracious. Most Merciful and HIM alone is worthy of all praise.

I would like to take this opportunity to thanks to my supervisor, Dr Nur Idora Abdul Razak for supports, suggestions, comment, valuable ideas, patient guidance and encouragement throughout this research.

I am greatly indebted to my panel, Prof Mahamod Ismail, Muhammad@Yusoff (Ir.), Prof Madya Ruhani and Dr Mohammad Huzaimy (chairman), for their valuable comments, suggestions and criticisms in proofing this thesis.

I wish to express my deepest appreciation to my parent for their undivided love, encouragement, and moral support. My wife Nuraini Rahmat and my two childrens Afif Syahmi and Adib Syahmi whose has provided a great deal of support, encouragement, and understanding throughout the duration of the project work and thesis preparation. I deeply appreciate them for their always said a prayer to remind me that I can do all things through ALLAH, who strengthens me.

I also would like to express my gratitude to my friends, lecturers, housemates, colleagues and staff at Faculty of Electrical Engineering who are directly or indirectly for their invaluable help, support, advice and encouragement in the completion of this dissertation.

# TABLE OF CONTENTS

	<b>Page</b>
<b>CONFIRMATION BY PANEL OF EXAMINERS</b>	<b>ii</b>
<b>AUTHOR'S DECLARATION</b>	<b>iii</b>
<b>ABSTRACT</b>	<b>iv</b>
<b>ACKNOWLEDGEMENT</b>	<b>v</b>
<b>TABLE OF CONTENTS</b>	<b>vi</b>
<b>LIST OF TABLES</b>	<b>viii</b>
<b>LIST OF FIGURES</b>	<b>ix</b>
<b>LIST OF PLATES</b>	<b>xi</b>
<b>LIST OF SYMBOLS</b>	<b>xii</b>
<b>LIST OF ABBREVIATION/NOMENCLATURE</b>	<b>xiii</b>
<b>CHAPTER ONE: INTRODUCTION</b>	<b>1</b>
1.1 Why Use MIMO?	1
1.1.1 Antenna Arrays	2
1.1.2 Spatial Multiplexing	2
1.1.3 Advantages of MIMO System	4
1.2 MIMO System for STBC Scheme (STBC-MIMO)	4
1.3 Alamouti Code for Transmitter	5
1.4 Alamouti Encoder	6
1.5 Overview of MIMO Hardware Testbed	8
1.6 MPSK Modulation Technique	13
1.7 Constellation Diagram	13
1.8 Motivation	14
1.9 Problem Statement	15
1.10 Dissertation Organization	15
<b>CHAPTER TWO: LITERATURE REVIEW</b>	<b>16</b>
2.1 Research Paper Literature Review	16
<b>CHAPTER THREE: RESEARCH METHODOLOGY</b>	<b>18</b>

3.1	Flow Chart	18
3.2	Coding Tool Using Xilinx ISE 14.2	19
3.3	Encoder RTL Design for STBC	19
<b>CHAPTER FOUR: RESULTS AND DISCUSSIONS</b>		<b>25</b>
4.1	Output Waveform From the Transmission Encoder Acquired Randomly From Chipscope Pro Analyzer (Test Code, for QPSK Without Alamouti Scheme)	25
4.2	Output Results of Constellation Diagram for One Transmitter Antennas (Test Code, for QPSK Without Alamouti Scheme)	26
4.3	Output Waveform From the Transmission Encoder Acquired Randomly From Chipscope Pro Analyzer (16 PSK Modulation With Alamouti Scheme)	26
4.4	Comparison Result Between HDL Simulation in Binary Form and Actual Waveform Acquired From Chipscope Pro Analyzer.	29
4.5	Output Results of Constellation Diagram ON Alamouti Scheme System With Two of Transmitter Antennas for 16 PSK Modulation Technique	31
<b>CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS</b>		<b>32</b>
