ACKNOWLEDGEMENT

I would like to acknowledge the foremost contribution provided by my Supervisor Associate Professor Dr Habibah Hashim for her guidance throughout the completion process of this thesis. She has made important comments and suggestions at every stage of my learning process. The period of my study has been an opportunity for me to learn from her experiences and devotion to research.

I am indebted to my family especially my wife, daughter, son, father, mother, sister for their encouragement, support and love. They have been an inspiration to me. This appreciation is also extended to my parent for their support and prayer for my success. Without help from all of these people, it would be having been difficult to complete the study.

ABSTRACT

Latest trend in green computing and cloud computing require efficiency in consolidating virtual machine without degrading quality of service. In this study, we are more concern on minimizing the migration of Virtual Machine, and it somehow will produce lowest power consumption. In order to achieve that we are proposing a new algorithm which it will calculate on the fly the Lower and Upper Threshold Limit by using Statistical Process Control theory. This new algorithm is called Dynamics Threshold Optimize System. Here we are applying three sigma theories in order to get the desire range for the threshold limit. And from there we are also trying to optimize the Lower Threshold Limit by applying another secondary algorithm which is called Optimize Warm Threshold Limit. This proposes technique will try to find out the mod value from the range of mean value and existing Lower Threshold Limit. When the mod value is bigger than existing Lower Threshold Limit then mod value will replace existing Lower Threshold Limit.

Index Terms – cloud computing, green computing, Dynamics Resource Allocation, Statistical Process Control, Three Sigma.

TABLE OF CONTENTS

AUTHOR'S DECLARATION	i
ACKNOWLEDGEMENT	ii
ABSTRACT	iii
TABLE OF CONTENTS	iv
LIST OF FIGURES	vii
LIST OF TABLES	x
CHAPTER ONE: INTRODUCTION	1
1.1 DEPLOYMENT MODEL OF CLOUD.....	2
1.2 HOW RESOURCE ALLOCATION WORK	5
1.3 PROBLEM STATEMENT.....	5
1.4 OBJECTIVE.....	6
1.5 HYPOTHESES.....	6
1.6 THESIS ORGANIZATION.....	7
CHAPTER TWO: LITERATURE REVIEW	8
2.1 GREEN CLOUD COMPUTING.....	8
2.2 GREEN CLOUD ARCHITECTURE.....	11
2.3 VIRTUALIZATION.....	13
2.4 HEURISTIC BASED RESOURCE ALLOCATION.....	14
2.5 UPPER AND LOWER CONTROL LIMIT.....	15
CHAPTER THREE: METHODOLOGY	17
3.1 CLOUD COMPUTING MODEL.....	17
3.1.1 User Level Middleware.....	17
3.1.2 Core Middleware.....	17
3.1.3 System Level.....	18
3.2 DESIGN SOLUTION.....	18
3.2.1 Overview of Main System	18
3.2.2 Intelligent VM Management System	19
3.2.3 Dynamic Threshold Optimize System.....	21
3.2.4 Optimize Warm Threshold Limit.....	24

3.2.5	VM Placement.....	25
3.3	TOOL USED.....	26
3.3.1	Cloud SIM.....	26
3.3.2	Neat Bean.....	27
3.3.3	Mini Tab.....	27
3.4	DATA COLLECTION METHOD.....	28
3.5	IMPLEMENTATION OF PROPOSED TECHNIQUE.....	29
3.6	SETTING FOR CLOUD ENVIRONMENT.....	31
3.7	VM MANAGEMENT SETTING.....	32
3.7.1	Local Regression.....	32
3.7.2	Minimum Migration Time.....	32
3.8	DATA ANALYSIS PROCESS FLOW.....	33
3.8.1	Normality Test.....	33
3.8.2	Correlation Test.....	34
3.8.3	Simple Linear Regression.....	34
3.8.4	Multiple Linear Regression.....	34
3.9	HYPOTHESIS MODELS.....	37
3.10	TEST CASE MATRIX'S.....	38
3.10.1	Naming Convention of Case Study.....	38
CHAPTER FOUR: EXPERIMENTAL RESULT.....		45
4.1	CASE 1 – STATIC HOT THRESHOLD LIMIT.....	45
4.2	CASE 7 – DYNAMICS THRESHOLD OPTIMIZE SYSTEM.....	48
4.3	CASE 3 – OPTIMIZE WARM THRESHOLD LIMIT.....	53
4.4	CASE 3 – STATIC HOT THRESHOLD LIMIT AND DYNAMICS THRESHOLD OPTIMIZE SYSTEM.....	56
4.5	CASE 4 – STATIC HOT THRESHOLD LIMIT AND OPTIMIZE WARM THRESHOLD LIMIT.....	63
4.6	CASE 5 – DYNAMICS THRESHOLD OPTIMIZE SYSTEM AND OPTIMIZE WARM THRESHOLD LIMIT.....	69
4.7	CASE 6 – DYNAMICS THRESHOLD OPTIMIZE SYSTEM, OPTIMIZE WARM THRESHOLD LIMIT AND STATIC HOT THRESHOLD LIMIT.....	74
