**SCHEDULING ALGORITHM FOR
MULTIUSER DIVERSITY IN URBAN
AREA**

HAMIZAH BINTI MOHD MAHAYUDIN

Dissertation submitted in partial fulfilment
Of the requirements for the degree of
Master of Science

Faculty of Electrical Engineering

January 2015

ABSTRACT

Generally it is known that population density in the city is coupled with an increase in ownership of smart phones equipped with a wireless system which allows everyone to have access to the internet at any time anywhere. However, most of the wireless cellular network depending on the network to reliably and efficiently distribute data to a large number of users. The problem of radio resource sharing by users with different requirements are demystify by presenting four types of scheduling algorithm which is adopted for allocating system resource. Hence, analysis of the wireless connection attribute such as fairness, throughput and delay occur during users demanding for different services are presented. Max Rate and Round Robin algorithm were used as a reference for analysing throughput and fairness respectively. Meanwhile, Proportionally Fair Scheduling and Rate Craving Greedy attain in the concept of multiuser diversity by improving the throughput without deal fairness. Overall scope is based on the urban area and pedestrian user because only one fading channel that were used - Filtered Gaussian Noise. Common technique that is used to transmit signals in wireless is OFDM. The performance of these algorithms is analysed and compared through MATLAB computer simulations.

Keywords—algorithms, fairness, throughput, delay, multiuser diversity.

ACKNOWLEDGEMENT

This Master thesis project is the final step in obtaining my Master of Science in Telecommunication and Information Engineering (EE700) at MARA University of Technology (UiTM).

The thesis was conducted under the supervision of Dr. Nur Idora Abd Razak, lecturer in Wireless Department of Faculty of Electrical Engineering at UiTM Shah Alam. I have been working on my Master thesis project from September 2014 to January 2015. While undertaking this project I have had much encouragement from many people. I would like to express my sincere gratitude.

First of all I am particularly indebted to Dr. Nur Idora Abd. Razak, my supervisor. She was been a great support since the beginning of the thesis and showed trust in me when I first approached her with the aim of finishing my thesis within one working semester. In some circumstances when I had unexpected problems during my project, she was there to find a solution and provide full guidance with patience and flexibility.

Further, I want to express my deep respect to my co-supervisor, Dr. Azlina Idris.

Secondly, I would also like to thank to my EE700 friend especially Luqman Fitri Shamsuddin who helped me a lot in editing my MATLAB coding and gave me suggestions. Further, I would like to thank everybody who has helped me by proofing reading my thesis. Finally, I want to thank my family for their unwavering support.

TABLE OF CONTENTS

	Page
AUTHOR'S DECLARATION	ii
ABSTRACT	iii
ACKNOWLEDGEMENT	iv
TABLE OF CONTENTS	v
LIST OF TABLES	vii
LIST OF FIGURES	ix
LIST OF SYMBOLS	xi
LIST OF ABBREVIATION	xii
CHAPTER ONE: INTRODUCTION	1
1.1 Background	1
1.2 Problem Statement	4
1.3 Objectives	5
1.4 Scope of Work	6
1.5 Thesis Organization	7
CHAPTER TWO: LITERATURE REVIEW	8
2.1 Introduction	8
2.2 Previous Study on Scheduling Algorithm	9

2.3	The Need for Scheduling Algorithm to Maintain QoS Requirements	11
CHAPTER THREE: RESEARCH METHODOLOGY		17
3.1	The Method of the Research	17
3.2	Designation of The Simulation for the Wireless Environment	17
3.3	Analysis for the Algorithm Characteristics	18
3.4	Analysis Based on QoS Requirements	18
CHAPTER FOUR: RESULTS AND DISCUSSIONS		20
4.1	Simulating Wireless Environment	20
4.2	Scheduling Algorithms	28
4.3	QoS Requirements	38
CHAPTER FIVE: CONCLUSION AND RECOMMENDATIONS		44
5.1	Conclusions	44
5.2	Recommendations for Future Works	45
