ACKNOWLEDGEMENT

First and foremost, I would like to praise Allah S.W.T for giving me the approval and strength to complete this final year project report lucratively.

With my spacious sense of appreciation to my project supervisor, Pn. Suzi Seroja Sarnin, I would like to give her special thanks for her guidance, support, ideas, comment and encouragement. Without her I will not be able to finish my project in the given time successfully and effectively.

Besides that, I would like to thank all the people who have contributed either directly or indirectly for the accomplishment of this project, especially to my family members who have given me a lot of support and encouragement.

Finally, I would also like to convey my appreciation to all my friends for their support and encouragement to complete my project.

ABSTRACT

This project illustrates the simulation and performance of BPSK and 8-PSK in CDMA. This model consists of transmission channel, transmitter and receiver. This simulation is deal with two channels, channel one is using BPSK and channel two is using 8-PSK. Cyclic codes is use to encode and decode the digital signal of the two channels before modulation and after demodulation process. The main objective is to compare and identify which channel is better by analyzing the performance of both channels. Besides, this project will show why CDMA is the most excellent multiple access compare to other. This project is simulated via Matlab Version 7.5.

TABLE OF CONTENTS

CHAPTER	TITLE	PAGE
	DECLARATION	i
	ACKNOWLEDGEMENT	ii
	ABSTRACT	iii
	LIST OF FIGURES	iv
	LIST OF TABLES	vi
	LIST OF ABBREVIATIONS	vii
CHAPTER 1	INTRODUCTION	
	1.1 Objective	1
	1.2 Scope of Work	1
	1.3 Digital Communication System	2
	1.4 Modulation Technique	3
	1.5 Code Division Multiple Access	3
	1.6 Cyclic Codes	4
	1.7 Matlab Simulation	4
CHAPTER 2	LITERATURE REVIEW	
	2.1 Phase-Shift Keying	5
	2.1.1 Binary Phase-Shift Keying	6
	2.1.2 8 Phase-Shift Keying	10
	2.2 Code Division Multiple Access	15
	2.2.1 CDMA Spectrum	16

	2.2.2 Spread Spectrum Features of CDMA	17
2.3	Cyclic Codes	20
	2.3.1 Cyclic Codes Polynomials	20
	2.3.2 Encoding Cyclic Codes	21
	2.2.3 Decoding of Cyclic Codes	24
	2.2.4 By Using Dividing Polynomial	25
	2.2.5 Additive White Gaussian Noise Channel	26
CHAPTER 3	METHODOLOGY	
	3.1 Block Diagram and Flow Chart	28
CHAPTER 4	RESULTS AND ANALYSIS	
	4.1 Simulation Result	31
	4.2 Performance Result	42
	4.3 Tabulated Result	44
CHAPTER 5	DISCUSSION AND CONCLUSION	
	5.1 Discussion	45
	5.2 Conclusion	46
CHAPTER 6	FUTURE WORK	47
