## ACKNOWLEDGEMENT

Alhamdulillah, praises and thanks to Allah because of His Almighty and His utmost blessings, I was able to finish this research within the time duration given. Firstly, my special thanks goes to my supervisor and my lecturer, Dr Hasiah Binti Mohamed@Omar for her support, guidance and encouragement. She has been a great help through the progress and completion of this paper and only Allah can repay all of her good deeds and sacrifices.

Special appreciation also goes to my beloved parents En Muhamad Bin Daud and Pn Suriani Binti Mohd Hashim for their prayers and morale support. No matter how great accomplishment I received, nothing can be compared with the love given by all of them. May Allah S.W.T blessing both of them.

Last but not least, I would like to give my gratitude to my dearest friend and to everyone who was directly and indirectly involved in this project for their support and encouragements for me to finish this research.

## **ABSTRACT**

Nowadays, buying process through online is commonly used by many people. There are so many purchasing process been used through online such as clothes online shopping, shoes online shopping and many more. E-commerce is the most visible business on the World Wide Web that uses business to consumer's models. The main goal of the e-commerce business site is to sell goods and service online. For this project, Evolutionary prototype model is used in system development. It helps to build this system known as Backpack Online Purchasing System phase by phase from beginning to the end. The phase included are requirement gathering, quick design, build prototype, evaluate and refinement requirement, engineer product. Evaluation process was conducted to 33 respondents which are 30 users and 3 experts' user. From the evaluation analysis, the highest mean is functionality construct of the system which mean is 3.98 (SD=1.02). In conclusion, BOPS is successfully developed and it is hope that this system can give benefit to business owner and user.
