Student Attendance System (e-StAS)

Nurdiana Ezani Binti Nordin

**Thesis submitted in fulfillment of the requirements
for Bachelor of Information Technology (Hons.)
Business Computing
Faculty of Computer and Mathematical Sciences**

January 2015

ACKNOWLEDGEMENT

Alhamdulillah, first of all I would like to thank Allah as finally I was able to finish this project within the time duration given.

Besides that, big thank I address to my supervisor and lecturer Dr. Hasiah binti Mohamed @ Omar. This is because without her guide, this project cannot be done properly like this. I am grateful to have such a supportive and helpful supervisor that gives me a lot of advices during the development of this project.

Special appreciation also goes to my beloved parents, Nordin Bin Jaafar and Noor Rizan Binti Hassan for their support and prays even though we are far. Finally, I would like to express my gratitude to my dearest friends and lectures on their support and help that contributes to my project completion and during my study. I am very grateful for the encouragement and energy that they give to me in order to complete this project. Thank you very much to all of you.

ABSTRACT

Nowadays, in managing and recording the student attendance data are still less effective and not systematic. This is due to the implementation of traditional or manual recording and managing method. Student Attendance System (e-StAS) is being proposed to ease the process of recording and managing the attendance data. E-StAS is a web-based system technology where will help the lecturer and HEA staff to record and manage data easier, faster and more efficiently. This system will allow users to generate report and calculate student attendance percentage. Waterfall methodology is used in order to help in developing this system. This methodology consists of five phases which are Analysis, Design, Development, Testing and Evaluate phase. Thirty respondents completed a questionnaire designed to measure the navigation, ease of use, usefulness, ease of learning and user satisfaction. Thus, the result shows that this system is easy to use with the highest mean value of 4.34 (SD; 0.597). On top of that, an interview session with an expert has been done in order to get their review regarding the system performance and usability. As a conclusion, this e-StAS will give more benefits toward the users and hopefully it can contribute further in the process of managing and recording the student attendance data.

TABLE OF CONTENTS

CONTENTS	PAGE
SUPERVISOR'S APPROVAL	ii
DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF FIGURES	x
LIST OF TABLES	xi

CHAPTER ONE: INTRODUCTION

1.1	Project Introduction	1
1.2	Problem Statement	3
1.3	Current Process	4
1.4	Project Objective	6
1.5	Project Scope	6
1.6	Project Significance	7
1.7	Project Framework	7
1.8	Conclusion	9

CHAPTER TWO: LITERATURE REVIEW

2.1	Web-Based Application	10
	2.1.1 An Overview	10

2.1.2	Web-based Benefits and Challenges	11
2.2	Attendance System	12
2.2.1	Attendance Terminology	13
2.2.2	Online Attendance System	14
2.2.3	Student Attendance Management System	15
2.2.4	Online Student Attendance System	16
2.3	System Development Model	17
2.3.1	Waterfall Model	17
2.4	Similar Existing System	19
2.4.1	Example of Interface of Similar Existing System	20
2.5	Implication of Literature Review to Project Development	22
2.6	Conclusion	23

CHAPTER THREE: RESEARCH METHODOLOGY

3.1	Methodology Overview	24
3.2	The Analysis Phase (Preliminary Study)	26
3.3	The Design Phase	27
3.3.1	User Interface Design	33
3.3.2	Database Design	34
3.3.3	System Design	34
3.4	Development phase	35
3.5	The Testing Phase	37
3.5.1	Unit Testing	38
3.5.2	System Testing	38
3.6	System Evaluation Phase	40
3.7	Conclusion	41
