ABSTRACT

Long Term Evolution (LTE) is a radio access technology proposed by 3GPP (3rd Generation Partnership Project) which capable of enhancing the performance of wireless system. However, fulfilling the indoor service requirements by providing the LTE coverage is not enough since it is very difficult for the network operators to maintain high QoS in the building. Hence, the deployment of Femtocell which complements the existing Macrocell network via Digital Subscriber Line (DSL) is the best solution to address the issue. LTE-Sim is used to simulate the LTE-Femto network scenario and three packet scheduling algorithms; PF, MLWDF and EXP/PF were selected for downlink transmission to analyze the performance metrics of the triple play applications. Simulation results have shown that there are several packets scheduler's that are in compliance to the 3GPP standard. For instance, MLWDF delivers the highest throughput value of VoIP and video whereas EXP/PF for the best effort flows. On the other hand, PF algorithm is not recommended for scheduling real-time traffic as it delivers the worst results for throughput and delay. However, it performs well for best effort flows. Nevertheless, in order to provision the value of throughput and delay which satisfy the QoS, the number of active Femtocells in the network should be above 19.

ACKNOWLEDGEMENT

First and foremost, I would like to praise my most gratitude to the Almighty Allah S.W.T. for endowing His mercy in giving me such a great opportunity to complete my research within the given period.

My sense of appreciation also goes to my research supervisor, Dr Darmawaty Binti Mohd Ali for all her continuous support, guidance and advices throughout the learning processes and research completion.

I would also like to thank my beloved family members especially to my lovely husband for his patience and supports as well as both parents for their prayer and motivation. They really inspired and motivated me throughout the journey.

Last but not least, the dedication goes to all of my friends and individuals who directly or indirectly involved in giving their ideas and helps. Their assistance and kindness were very much appreciated.
