ABSTRACT

Office ergonomics is a widely acceptable means of providing an enabling environment that best facilitates employees' productivity and performance. This study sees to find out the impact of office ergonomics on employee's productivity using the Pejabat RISDA Negeri Kedah (RISDA) as a case study. The objectives of the study are to investigate the relationship between factors of office ergonomics on employee's productivity, to determine the most influence factors of office ergonomic on employee's productivity. The study was based on a sample of 100 RISDA's staff from two position which is executive and non-executive. Data for the study obtained mainly from the administration of questionnaires is analyzed quantitatively using the SPSS and Microsoft Excel and presented with the aid of frequency distributions, pie charts, bar chart, tables, pictures and graphs. The research identified considerable office ergonomic deficiencies, which included uninspiring and old-fashioned office design and décor (largely cellular offices), use of dark wooden partitions resulting in poorly illuminated offices, and continuous use of un-ergonomic furniture.

ACKNOWLEDGEMENT

First praise is to Allah S.W.T., the Almighty, on whom we ultimately depend for guidance and forgiveness. This final project paper had been an effort and commitment for the completion of my Bachelor in Office Systems Management (Hons.). I wish to acknowledge the immense support received from my advisor, Madam Asma Shazwani binti Shari whose regular evaluation of my work, amidst counsel and words of encouragement led to the successful completion of this work. For the key interest and support she unreservedly offered towards my work, I wish her God's bountiful blessings.

This final project paper would not have been possible without the guidance from my supervisor, Tuan Haji Samad bin Saad (Admin Assistance) and all employees of Pejabat RISDA Negeri Kedah (RISDA), whose guidance, understanding and constructive comments were most valuable in helping me complete the final project.

Lastly, I believe that I couldn't have attained any personal development especially to this level without the prayers and counsel of my dear parents. I wish them long life, prosperity and amazing grace from the good God.

CHAPTER 1

INTRODUCTION

Background of Study

Most people spend fifty percent of their lives within indoor environments, which greatly influence their mental status, actions, abilities and performance (Sehgal, 2012). Better outcomes and increased productivity is assumed to be the result of better workplace environment. Better physical environment of office will boost the employees and ultimately improve their productivity. Employees in different organizations have different office designs. Every office has unique furniture and equipment, lighting, spatial arrangements, different levels of noise and temperature.

Office ergonomics has been recommended by many studies as one of the key guides to equipping employees at the workplace to help produce best productivity. It is the quality of the employee's workplace environment that most impacts on the level of employee's motivation and subsequent performance. How well they engage with the organization, especially with their immediate environment, influences to a great extent their error rate, level of innovation and collaboration with other employees, absenteeism and, ultimately, how long they stay in the job (Al-Anzi, 2012).

Washington State Department for Labour and Industry in its document identifies office ergonomics is the branch of ergonomics dealing specifically with the office environment. This field of ergonomics considers how key workplace elements such as workstations, computers, chairs, lighting, noise level, room temperature and others could be tailored to fit and enhance employee health, safety and performance
