## ABSTRACT

This paper is to focused on the level of visitor awareness towards risk at water theme park around Malaysia whereas the objective of the study are to identify the risk at water theme park, to identify the visitor level of awareness at water theme park and lastly from the study, to propose recommendation for future research. The study is being carried out by these four steps which are through primary data collection, secondary data collection, interview and questionnaire and lastly pilot study. Primary data collection involve the literature review writing or else can be said as desk study where secondary data collection are obtained from the journal, books, thesis from the library. While interview and questionnaire is a method used to obtain information at the case study site in order to get the final data collection. The result of the study shows that most of the visitor have a good awareness level towards risk at water theme park and they are aware on it. However, the information obtained are based on the findings from the questionnaire. None of any personnel from the site are willing to have an interview session and if any, a long process need to be undergone to obtain their cooperation.

## ACKNOWLEDGEMENT

I would like to express my gratitude and regards to Puan Wan Zuriea binti Wan Ismail, my supervisor for her exemplary guidance and encouragement towards me all the way I am completing my dissertation. Her support towards me from time to time has helped me a lot.

I also would like to thank all personnel from my case study site; the water theme park staff and the respondent for all their helping hands in order for me to obtain information directly or indirectly.

Lastly, I thank almighty, my parents, brother, sisters and friends for their constant encouragement without which this assignment would not be possible.
