

**UNIVERSITI TEKNOLOGI MARA**

**A COMPUTATIONAL SIMULATION  
OF FORESHORE WAVE AT ROCKY  
COAST LANDFORM NEAR  
TERENGGANU COASTLINE  
DURING MONSOON SEASON**

**MUHAMMAD LUQMAN HAKIM BIN  
MOHD SHAIFUL AFZAM**

**DIPLOMA**

**February 2022**

## **ACKNOWLEDGEMENT**

First and foremost, I want to thank God for allowing me to seek my diploma and for guiding me through this long and tough path. My supervisor, Mr. Mohamad Zamin bin Mohamad Jusoh, deserves my gratitude and thanks.

After that, I'd want to thank everyone of my friends and family for their support.

Finally, I would want to thank my father and mother for having the vision and desire to educate me. This magnificent work is dedicated to you both. Alhamdulillah.

## **ABSTRACT**

There is no record or studies on foreshore wave Terengganu coastline landform during monsoon season especially rocky beach, so it hard to predict how the wave at that beach flow. By using Ansys Space Claim, the model of Pantai Teluk Bidara had been designed. The wave also has been simulated by using Ansys Fluent to know how the wave flow at that beach. As the result, we can see how the wave at the foreshore at rocky beach will flow. From this, the simulation will enhance understanding how wave at foreshore of rocky beach at Terengganu during monsoon season flow. This helps the enhance community understanding how the wave flow.
