ABSTRACT

This particular research was conducted to seek information whether the Institution of Higher Learning in Malaysia aware and concerned about people with disability (PWD) or not in terms of consideration in design. Only recently, the voice of organisation which stood up for the issue of disability is heard and be taken seriously. However, the implementation is still in early progress. There is still lacking in knowledge and improper design that consider the PWD.

Based on the research, in terms of accessibility and facilities, the design is not according to anthropometric and ergonomic of Person with disabilities, more specifically, for the wheelchair users. In order for this nation to strive and be an advance and developed country, issues like this had to be taken seriously by both the government and society.

This research is done is UiTM Seri Iskandar, Perak, to further identify whether the design of the food court is up to the standard. UiTM perak campus can be considered new campus, being built in 1996 and started using in 1998. The construction still commencing later on before fully completion. During that time issues of disabled friendly design is not major. Thus this research intended to find any design flaws or that design had been followed according to the standard.

ACKNOWLEDGEMENT

Assalamualaikum, first I would like to say Alhamdulillah, I managed to complete this task of ARK 587 Research Paper. This research is The problems of food court design for disabilities especially wheelchair user. During the course, I learned a lot about thesis dissertation in research class and about disabilities during my research finding on my own. These knowledge is crucial for both academically and to equip me in facing the industry afterwards of pursuing PART II programme. As a human being I learned a lot about the struggles of the unfortunate. In this moment I will not forget to mention my research supervisor Ar. Azman bin Zainonabidin who help me a lot through this research from day one till completion. His knowledge and guidance is important in completing this task. Without him it will not be possible to realise this big assignment. I will also thank Assoc. Prof. Ismail bin Samsudin as the coordinator of the dissertation who gave the lecture throughout the semester and teach me on how to do a research. I also would like to thank Ar. Raja Azman Shah and mr. Azhan as the panel for the presentation and giving comments on how to improvise this research. Last but not least friends, seniors and families who involved directly or indirectly in helping me complete this task.
