ACKNOWLEDGEMENT

Thanks to God, with his blessings, I do manage to complete my project paper within the time given.

I also want to take this opportunity to extend my deepest appreciation and gratitude to my supervisor, Sir Haijon Gunggut that fully gives commitment and cooperation in helping and guides me in completing my research. Thank you for the time and energy that have been invested in helping me and my friends.

I also want to say thank you for all my friends that do helping me while doing my research. Thank you for being cooperative friends. I also want to extend my gratitude to my beloved family that always supporting and advising me in my study.

Thank you.

ABSTRACT

This report presents the findings of a research project which examined the predomination of female students at AlmaCrest International College (A.C.I.C). The research involved 100 students among 520 of amount population in ACIC College. The students had to complete one set of questionnaire which consisted of 8 items using the Likert Scale for the objective one, while two more objectives was based on secondary resources that are statistical record of students and articles view. The data was analyzed using the Chi-Square Tests to determine the correlation between course offered and female students predomination in ACIC College. The Chi-Square tests showed that there is a significance value between course offered and gender. However, the significant show is very weak. Therefore, there is no conclusive evidence to prove that course offered being the main reason of female students predomination among colleges. Predomination of female students in other colleges also become a new trend nowadays and there are also other possible factors provided in this study relating to the less male students in the tertiary educational fields.
