ACKNOWLEDGEMENT

When first time we came in for this semester, we were told that we have to complete one research in order to fulfill the course requirement. When our lecturer Prof. Dr. Haji Hazman Shah Abdullah gave us a list of topics for us to choose, we know our nightmare has begun. However, he taught us clearly on how to complete the research especially the format and we are very thankful.

We had a very difficult time to complete the research proposal because of time constraint. Final examination is just around the corner and we are still struggling to complete the research rather than having our own revision. Thank God, our SPSS lecturer and supervisor, Mr. Azma Asnawi Shah and Miss Norziana Lokman were willing to give us their hand and supervise us in ensuring the quality of our research proposal.

We also thank to ourselves because even though we had difficulties in completing this research, at last we manage to do it. Before this we do not know how to do a research, but now we know the correct format on how to do it. This is a useful experience to us.

We would like to thank God Almighty without His blessing we would not have completed this proposal on time.

THE ABSTRACT

Abstract

Outsourcing is a way to achieve not only strategic goals, but also to improve customer satisfaction and reduce costs. It occurs when bank hires another company to manage, maintain and run its non-core services operations. This paper is focus mainly on outsourcing of computer system operations to third party. The study will measure the awareness among banks' customer in relation to outsourcing of computer system operations as well as to view how the customer feels towards this move and whether the services produce by the banks can actually improve after the move has been made by the banks. Lastly what can be done to ensure that customer satisfaction can be enhanced. It has been carried out via questionnaires and an interview with the local bank's spokespersons. From the findings, it has shown that the level of awareness, feelings towards security and satisfaction among the banks' customers after the banks undergoing outsourcing their computer systems do give effect to the effectiveness of the local banks' customer services especially in the Shah Alam area.
