

PREVENTIVE MAINTENANCE FOR THE AIR CONDITIONING SYSTEM IN PTAR 1

KHAIRUL DAHRI BIN SOBERI 98180447

A project report presented as partial fulfillment of the requirements for the award of Diploma in Mechanical Engineering (Manufacturing).

FACULTY OF MECHANICAL ENGINEERING UNIVERSITI TEKNOLOGI MARA SHAH ALAM, SELANGOR D. E

OCTOBER 2002

ACKNOWLEDGEMENT

In the name of Allah, the most Gracious and Merciful. All the praises and thanks only to Him. We are grateful for giving us courage to finish the final project.

First of all, I would like to convey our gratitude and thank to my project advisor, En. Jamaluddin bin Mahmud for his guidance, supervision, encouragement and discussion throughout the work on this project. Thank you also to En. Anuar bin Hashim amd En. Zukri for their help and information during observation and checking on Perpustakaan Tun Abdul Razak air conditioning plant.

Not to forget, thank you to En Shukri Nizam for his ideas and help during the period of this project.

In addition, thank to my parent for their guidance and love in nurturing me to be who I am today. Last but not least, thank you to our housemates for their encouragement during the period of this project. May Allah bless you all.

ABSTRACT

Preventive maintenance is a complex maintenance system. It is needed to ensure any components function accordingly and reflect high reliability. The objective of this project is to study air conditioning system and propose the preventive maintenance schedule for Perpustakaan Tun Abdul Razak 1 air conditioning plant. In order to come up with the maintenance schedule, study and familiarization on the air conditioning system in PTAR 1 are done. Then, the data collected is analyzed and preventive maintenance schedule is proposed. As the result, the preventive maintenance schedule is presented and discussed. The result ensures that no failure will occur during operation. The period of checking, service and replacement is between 1 month to 1 year for all components. Finally, as a conclusion, based on the study, it is found that preventive maintenance is more suitable and reliable than breakdown maintenance for servicing particular air conditioning system in Perpustakaan Tun Abdul Razak.
