## PREFACE

First and foremost, we are grateful to Allah S.W.T for his blessings and grace in guiding us during this project. Although this project is a requirement for our diploma, it has also given us a new opening towards tertiary studies and an opportunity to add to what we have learned in ITM.

This project report will give the reader an understanding of a hostel maintenance system and we believe that this report can be used as a reference for future planning or a hostel maintenance control plan.

To all the people involved in this project, we would like to thank them for their support and cooperation extended to us in preparing this report.

## ACKNOWLEDGEMENT

We would like to take this opportunity to thank our project advisor, Tuan Haji Md. Fuad Bahari for his advise and guidance given. Without his help, this project would not be successful at all.

We would also like to thank all the Maintenance and Development Unit staff who have help us such as Engineer Saaid Hassan, En. Abdul Rahman Huraissen, En. Jamaluddin and all the others who have willingly spared their time to explain to us what maintenance is. The hostel administration staff such as the Manager, Puan Rakiah, her assistant, En. Fauzi have also been a great help to us. Without their cooperation, we would never achieve what we have within such a short time.

Finally, I would like to thank Zulkiflee and all our friends who have aided us in one way or the other to complete this report.

## 1.0 INTRODUCTION

### 1.1 Maintenance System in hostels

This is a final year project report on the system of maintenance implemented in hostels. The hostel in concern were the Centre of Preparatory Studies (PPP) hostels: Maintenance is a complex and a many faceted activity. There is a growing awareness of the activity because of the effects it has to any governing body. This is because an effective maintenance has a big effect on social and economical aspects such as higher productivity and less spending on repairing equipment.

An effective maintenance system is a broad definition itself. Basically an efficient system, is one that does the repair work as early as possible or if better keeps the facilities in a good condition till it doesn't need repairing at all.

In this report we will try to consolidate all this scattered knowledge into a comprehensive account of the overall maintenance process implemented in hostels.

### 1.2 Definition

The definition for system in reference to the American Heritage Dictionary is "a group of interrelated elements forming a collective entity". In this case the collective entity has a function which is to perform a task. The interrelated elements are all the components and sub-systems forming the system and giving support to it where anything done will give an effect to the other components and the system as a whole.
