## ACKNOWLEDGEMENT

I would like to express my gratitude to Puan Suliahti bt Hashim for being so helpful in supervise me during the accomplishment of my dissertation. I also like to express my gratitude to all my lecturers for teaching and guiding me until the completion of this study.

A lot of thanks go to Puan Ir. Noraini Bahri, Assistant Manager of Personnel Division in CIDB. Puan Sarinah Omar, Assistant Manager of GIAT MARA Sdn. Bhd. , Kapten (B) Hj Abdullah Chik bin Ranin, Manager of Pusat GIAT Kuala Selangor, En Salleh bin Rahmat from ABM Selangor, En Azizi Rahman from IKBN Pontian, Cik Yusniza from ILP Kuala Terengganu and also to the all staff from construction training centres which is helped me to find out the data needed for this dissertation.

Last but not least, special thanks to my beloved parents and all my friends for being understanding and helpful during the hard time that I have been through along the accomplishment of this disseration.

## ABSTRACT

Construction training centers is the place for trainees to do their training programme. The main objective of the construction-training centre is to provide the quality, productivity and efficiency of construction workers. By providing skill training, the construction training centres is helping the nation ensure quality construction works, efficient construction process and on-time product delivery. To facilitate a systematic construction skills training, they have developed construction-training modules based on the National Occupational Skill Standards (NOSS). NOSS is set together by the industry experts; comprising of industry players and professionals and experienced trainers.

These training centres is developed by the government which is appointed their agencies such as Construction Industry Development Board (CIDB), MARA, Majlis Latihan Vokasional Kebangsaan (MLVK) and Department Of Manpower.

These training agencies and the person who involved in the industry develop the occupational skill standard for the workers, which are, call National Occupational Skill Standards (NOSS).

The objective of the study is to know the programmes that training centers offered and comparison between them. To identify their graduate employment in the construction industry market and area of improvement in training programme. The other purposes of this study are also to analyse on how they produce the good and quality trainee and also their awareness on Health and Safety.

The collecting of data is done by doing the research at the agencies and given the questionnaire to the trainees at the training centre. These data is analyse by using the SPSS 10 and also Microsoft Excel.

From the overall, the role of construction training centers is important in providing the local skill manpower in government and private construction sectors. Therefore the existence of training centers in our country is significant in order to achieve objective skill training where as to provide quality construction.
