SANITÍZA

MIST STERILIZER (PRODUCT DESIGN)

Design Advisor : MRS IZZA SYAHIDA ABDUL KARIM

The end of 2019 a new virus had emerged and made a whole world live a state of worry. One of the working family when they came home, they don't even know whether they have virus on them. The pandemic has caused people to be wary about their hygiene and surroundings. It is seemed that people have to constantly sanitize their hands whenever they go out. But sometimes certain shop lots ran out sanitizers. Whenever people go back home, they'd have to sanitize their whole body before entering the house. But sometimes its difficult to control the amount of sanitizer. This could lead to wastage.

Sanitiza is a personal health. Product Mist Sterilizer is a simple product that can be use in front of house and can be use to sanitize the whole part of body before entering the house. It usually uses before entering house after back from work and back from outside. Mist Sterilizer is a product uses for people who want to sanitize all the things include the whole part of body after daily routine. The objectives of this product are sanitizer mist, and would ideally be kept by the entrance to the user's front home for them to sanitize the whole body before entering house and keep safe and stay hygienic. Other than that, I have use sustainable materials which are bioplastic, transparent acrylic, sanitizer(liquid) and stainless steel.

The objectives of Mist sterilizer are (1) to implement a minimalist concept, (2) to design a simple but elegant mist sterilizer, and (3) to improve design a mist sterilizer more functional. I'm hoping that my product will help to keep safe from virus when entering house. Particularly to family and neighbors This is due to the fact that they work very hard to stay safe. and clean.
