SUSTAINABLE FACE SHIELD

NA FOLDS FaceShield (PRODUCT DESIGN)

Design Advisor : MRS FADILA MOHD YUSOF

A simple brief about my final product for this semester. I am doing a Folded Face Shield. NA FOLDS FaceShield, a folded face shield that made from sustainable materials. I use this material to reduce the problem of the disposal of harmful materials and damage the environment and other life.

I made this product because users of the face shield are likely to have a problems when using a existing faceshield especially when they are working or playing sports. NA Folded FaceShield is a product that makes for sports. It will help athletes to avoid getting a viruses while playing sports. Not only athletes can use it, anyone who work on the high risk to get the virus also can use the folded face shield.

We used a material that are from paper box combined with banana leaves. This is because the material are sustainable. It also have a good element to make as a face shield such as long lasting for example paperbox, the elements are hard and strong. This product is same as the existing face shield. The different between the folded face shield and existing face shield is folded face shield can folds and portable. Existing face shield are not foldable and portable. It will make a serious difficulties if someone urgently need to wear the face shield. The main material of making this product is banana leaves. So, this product are safe and no chemical needed for the face shield. To use the product.

Firstly, take out from the packaging. Then unfolded the face shield. And then, when the face shield are unfolded, you can place it on your face and wear it anywhere you want especially high risk place, such as crowded place or working place. The product is safe for human and nature. This is because the material we use is non toxic and chemical. The benefits of this product is they can save the nature because it is made from sustainable materials.
