ABSTRACT

Agarwood oil is a highly traded essential oil with a high price tag. The oil is extracted from the stems of resin-impregnated agarwood trees. Agarwood essential oil has been used in various applications, including incense, perfumery, medicinal purposes and religious ceremonies. Conventionally, agarwood essential oil is graded manually by a human expert sensory panel based on its physical properties such as odor, color intensity and infection level. The method for obtaining the quality of agarwood oil is time consuming due to the large number of test samples. Furthermore, humans are prone to fatigue as a result of continuously handling the samples. This research proposes an intelligent technique for grading agarwood essential oil based on its chemical properties using the artificial neural network (ANN) technique. Initially, the sample data of chemical compounds of selected agarwood oil were measured using gas chromatography-mass spectrometry (GC-MS) and then pre-processed in sequence by three pre-processing techniques, namely Z-score, PCA and stepwise regression; the number of chemical compounds was reduced from more than ninety to only seven, three and four, respectively. These significant chemical compounds from each pre-processing technique, were used as the input to ANN. To classify the agarwood essential oil into high and low qualities, this research applied a three backpropagation training algorithms—scaled conjugate gradient (SCG), Levenberg Marquardt (LM) and resilient backpropagation (RBP). The training and validation of the ANN was based on optimization of its training parameters and guided by the convergence of the mean squared errors (MSE). The result revealed that the ANN performance had the highest accuracy when training using the LM training algorithm. The ANN with the seven inputs (seven significant compounds from Z-score pre-processing technique) trained by one hidden neuron of LM algorithm provided the best performance with 100% for accuracy, specificity, sensitivity and precision as well as minimum convergence epoch.

ACKNOWLEDGEMENT

Firstly, I wish to thank God for giving me the opportunity to embark on my PhD and for completing this long and challenging journey successfully. My gratitude and thanks go to my supervisor Ts. Dr. Zakiah Binti Mohd Yusoff.

My appreciation also goes to my co-supervisors, Ir. Ts. Dr. Nurlaila Binti Ismail and Prof. Ir. Ts. Dr. Hj. Mohd Nasir Bin Taib for their great supports and mentorship. Special thanks to my colleagues from Advance Signal Processing Research Group (ASPRG) and my friends who are willingly sharing with me all the knowledge and experiences during on-going study.

Finally, this thesis is dedicated to the loving memory of my dearest father, Hj. Mahabob bin Khamis and my mother, Hjh. Zaliha Binti Ahmad for their vision and determination to educate me and their prayer for my successful. This piece of victory is dedicated to both of you. Alhamdulillah.

LIST OF SYMBOLS	xv
LIST OF ABBREVIATIONS	xvi
CHAPTER ONE INTRODUCTION	1
1.1 Research Background	1
1.2 Problem Statement	3
1.3 Objectives	4
1.4 Scope of Study	4
1.5 Significance of Study	5
1.6 Thesis Layout	5
CHAPTER TWO LITERATURE REVIEW	6
2.1 Introduction	6
2.2 Agarwood Essential Oil	6
2.2.1 Chemical Compounds of Agarwood Essential Oil	7
2.2.2 Agarwood Grading Method	8
2.3 The Extraction Method – GCMS Analysis	10
2.4 Data Pre-Processing	11
2.4.1 Min-Max Normalization	11

2.4.2	Decimal Scaling	11
2.4.3	Z-score	12
2.4.4	Principal Component Analysis (PCA)	12
2.4.5	Stepwise Regression	13
2.5	Intelligent Techniques	16
2.5.1	Support Vector Machine (SVM)	16
2.5.2	K-Nearest Neighbour (KNN)	17
2.5.3	Artificial Neural Network (ANN)	20
2.6	Performance Measurement	39
2.7	Summary	41
CHAPTER THREE RESEARCH METHODOLOGY		42
3.1	Introduction	42
3.2	Data Collections	44
3.3	Data pre-processing technique	45
3.3.1	Z-score	45
3.3.2	Principal Component Analysis (PCA)	47
3.3.3	Stepwise Regression	49
3.4	The Application of Artificial Neural Network (ANN)	53
3.4.1	Implementation of Scaled Conjugate Gradient (SCG)	55
3.4.2	Implementation of Levenberg Marquardt (LM)	57
3.4.3	Implementation of Resilient Backpropagation (RBP)	58
3.5	Performance Measurement	59
3.6	Summary	61
CHAPTER FOUR RESULTS AND DISCUSSION		62
