Firstly, thanks and appreciation to God, the Almighty, for showering His blessings on us throughout our research project, allowing us to completely finish the study. We would want to express our deepest gratitude to God Almighty for providing us with the courage, knowledge, ability, and time to begin this research project, strive, and finalize it.

Next, our thankful to Puan Zurina binti Md Nen, our research supervisor, for approval to conduct study and offering valuable supervision during this research. She taught us how to conduct studies and deliver our findings in the most clear and concise manner possible. The research project would not be accomplished without her supervision, and we are truly thankful for her support.

Besides, we'd like to show our greatest appreciation to all our ADS511 and ADS555 lecturers for their support, tolerance and continuous support, for supporting us finish this research study. They have provided us the flexibility to conduct our research study while ensuring that we stay on the right track and do not depart from our research's major goals.

It gives us great pleasure to express our gratitude to our family and friends. We are grateful to our family and friends for their love, patience, prayers, and positive support in helping us finish this research study. Their unconditional support and time are really precious and important in our efforts to complete this project.

## Abstract

*The purpose of the study to measure the students' academic performance depends on student's motivation during online distance learning (ODL). Students' academic performance are very crucial and important for every students and university. Academic performance is the evaluation of a student's ability in a range of academic areas. The students might have a problems during the Online Distance Learning (ODL) at home because of unconducive environment. Students need a conducive environments and supports during the study. Normally students need to attend face to face class that have fast internet access, the finest facilities and a conducive environment. The covid-19 Pandemic has changed the way of learning and the environment of learning for students. With pandemic that resulted to this health crisis, the study on students' academic performances is critical to reflect on the part of student's motivation to continue the study. This research study observes the students' ODL experience, students' academic performance, and impacts of students' ODL experience. A quantitative analysis of 100 students at UiTM Seremban 3 was used to perform this study, and the results indicate that there is a strong connection between students' experience in ODL and students' academic performance. Since the study is limited to using an online survey to evaluate trust, the results are quite inflexible, and the study taken is unable to reflect the respondent' feelings and thoughts. Since the study undertaken had limitations, additional research and on this topic is desperately required. As a result, it is proposed that future research use interviews with respondents to obtain feelings, resulting in better clarity of student cooperation.*
