FACE SHIELD TEMPERATURE

FACE SHIELD (PRODUCT DESIGN)

Design Advisor : MR MOHD HAMIDI ADHA MOHD AMIN

Coronavirus disease (COVID-19) is an infectious disease caused by the SARS-CoV-2 virus. Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. Due to this pandemic we have started with a new normal life which is to always clean ourselves, wear masks and sanitizers to reduce the risk of infection.

STAY LIFE is a face shield to reduce the level of infection for users from viruses. The main function of the face shield is to prevent the virus from infecting. It also has other functions like checking body temperature wherever you are. Therefore, we can know the level of our body temperature as a precaution if you have symptoms of the virus infection. It also works can open the shield with a slide up if you want to eat and do other things to make it easier for users not to open the face shield.

Based on online surveys that have been done shows that respondents are less comfortable when wearing mask and doing daily activities. From the interpretations I found, it is necessary to make a face mask that is simple and comfortable to wear. People prefer to wear face masks rather than face masks, even if it's not important in crowded places. In conclusion, I hope this product can reduce the risk of contracting the virus by using a face shield that can facilitate movement when doing daily activities.
