WATER DROPLET

CANTILEVER CHAIR (FURNITURE DESIGN)

Design Advisor : MR AHMAD FAZLAN AHMAD ZAMRI

WATER DROPLET is inspired by water for a comfortable and durable cantilever chair design. Water is the element of movement, feminine energy, feeling, forgiveness and cleansing. Water is emotion and water are fluid, it has no shape of its own but rather follows the shape of the earth below it, or what holds it. We can look at our physical bodies as the incredible earthen containers of the fluid essence that flows through them.

A cantilever chair is a chair whose seating and framework are not supported by the typical arrangement of 4 legs, but instead is held erect and aloft by a single leg or legs that are attached to one end of a chair's seat and bent in a round shape. This design technique is using the overhanging cantilever styling in both his furniture and architecture. This chair is suitable for the dining room and garden for teatime if you want to eat or are relaxing in the garden. This chair has a backrest and is round like a water droplet. Also, Cantilever chairs provide the perfect seating for visitors to your office. They are ideal for use in meetings and boardrooms and most are suitable for up to 8 hours of usage at a time. Cantilever chairs offer features such as lumbar support, fixed arms, padded seats, padded arms and chrome frames. The structure cantilever chair is steel and for the sitting, part use wood material to look minimalist style.

Hopefully, from the research that can be to shape something thing to a piece of furniture from the ideas obtained. it also has ergonomics that are suitable for activities such as eating, study, teatime, and anything other activities that are suitable for a cantilever chair.
