ACKNOWLEDGEMENT

First and foremost, I would like to say *Alhamdulillah* and gratefully thank Allah S.W.T for providing me with the mental and physical strength as well as other positive attributes notably perseverance to complete this challenging research paper.

Besides that, I would like to sincerely thank my research advisor Madam Rabiatul Alawiyah Zainal Abidin for her guidance, supervision and support. Her constructive comments and suggestions greatly assist in the successful completion of this research project paper.

I also would like to take this opportunity to extend my appreciation to all those who have assisted in one-way or another in the completion of this research paper. Sincere thanks to all my classmates from JBM2226A, batch Sept-Dec 2014 and UMW Offshore Drilling colleagues for their understanding, kindness and moral support during the testing time undertook to complete this research project paper.

Last but not least, my deepest gratitude to my beloved parents, family and fiancé for their unwavering support, invaluable assistance and sincere blessings.

ABSTRACT

The study is an attempt to investigate the macroeconomic risk influences on the KLSE Property Index due to the limited literature provided especially in Malaysia. The variables that are considered in this study are gross domestic product (GDP), interest rate (INTR), exchange rate (EXC) and money supply (MS). The sample of this study comprises of 40 observations which each of the independent and dependent variables are taken on a quarterly basis over a 10 year period from 2003 to 2012. For the data treatment purpose, this study used a methodology Multiple Linear Regression with time series data sources from Data Stream and EIU Country Data. Thereafter, econometric tests are conducted to observe the relationship of the macroeconomic risks toward the KLSE Property Index. An interactive software package Eviews7 is used for testing and analyzing the data collected. The results of this research paper will provide an indicative view and could form an important basis for the investors and policy makers in order to make an investment decision for their portfolio.
