

**HARDNESS PROPERTIES OF RUBBERWOOD FINISHING
EFFECTED BY FINISHING MATERIALS AND CURING VARIABLES**

AZLAN BIN MOHAMAD

**Final Year Project Report Submitted in
Partial Fulfilment of the Requirements for the
Degree of Bachelor of Science (Hons.) Furniture Technology
in the Faculty of Applied Sciences
Universiti Teknologi MARA**

JANUARY 2012

ACKNOWLEDGEMENTS

Assalamualaikum w.b.t

Praise to the almighty Allah the most gracious and the most merciful, for His blessing that give me healthy physical mental to finish this final project within the given time.

My special thanks also to my project supervisor; Mr. Amran Bin Shafie whose willingness to give and contributed his knowledge, effort and valuable time until the submission of this final paper. His support, suggestion and critics also contributed a lot in the completion of this project.

My thanks also go to the staff of Wood Department. Without their help, support and contribution, this project cannot run smoothly and complete. Last but not least, all my friends that always give me support physical and mental.

For all people that always give me strength. For all of your kindness, i really appreciate it. May Allah bless you.

Thank you so much.

ABSTRACT

HARDNESS PROPERTIES OF RUBBERWOOD FINISHING EFFECTED BY FINISHING MATERIALS AND CURING VARIABLES

Finishing is the last process of manufacturing furniture. But, it is the most important process that will determine the value of the furniture. Rubberwood is also the most famous raw material used to produce the furniture. These study purposes are to determine the hardness of the film coating on the rubberwood with different lacquer and drying time. Hardness pencil testing was used to determine its hardness properties. Polyurethane lacquer gives the highest grade follow by acid catalyst lacquer and nitrocellulose lacquer. However, polyurethane lacquer needs long time for complete cure. Nitrocellulose lacquer has short drying time but has poor film hardness properties. Acid catalyst lacquer has moderate hardness properties and does not require too much time to dry.
