

**MACHINING PROPERTIES OF TREATED OIL PALM LUMBER**  
*(Elaeis guineensis Jacq.)*

**SYAZANA BINTI MAT SAIPUDDIN**

**Final Year Project Report Submitted in  
Partial Fulfillment of the Requirements for the  
Degree of Bachelor of Science (Hons.) Furniture Technology  
in the Faculty of Applied Science  
Universiti Teknologi MARA**

**JULY 2014**

## **ACKNOWLEDGEMENT**

Assalamualaikum, Alhamdulillah, first of all I would like to thank Allah for the physical and mental health as finally I was able to finish my thesis for the subject FSG660 and also to my beloved family that did not give up gives support and spirit to keep up with the study and encourage leading towards the success of this project. I also would like to express my sincere gratitude to the Coordinator committee. Assc. Prof. Dr. Wan Mohd Nazri Wan Abdul Rahman for his continuous help and advice throughout this study. Appreciation is also extended to my Supervisor En. Ahmad Fauzi bin Awang @ Othman who contributed the knowledge, time, and guidance until completed my thesis successfully and my heartfelt thanks goes to Dr. Khairul bin Awang who is the research officer of FRIM for his help during the testing and evaluation process and also to Mdm. Saadiah Sahat who help me to analyze my result data. A big thank also to my Co-supervisor, Mdm Nur Hannani who was help me lot on finishing my project. I also was thanks to the staff in the factory of UITM Jengka and FRIM, who helped me directly or indirectly while I was conducting this research. I thank for their support and cooperation. Last but not least, thank to my beloved friends especially group AS2276B for their commitment and cooperation during this research. They give me some brilliant ideas and comments on my project. I just want to say that I love all of you and thanks for those involved in the finish of this research.

## ABSTRACT

### MACHINING PROPERTIES OF TREATED OIL PALM LUMBER (OPL)

Shortage of wood supply from natural and plantation forest is one of the main problems in order to ensure the existing of furniture industry in the future. Many researches have been done to commercialize non-timber resources such as the oil palm trunk (OPT) to the industry. The purpose of this study was to evaluate the machining properties of Oil Palm Lumber (OPL) by using different drying treatment(untreated and ethanol treated) at three different layer of the trunk, there are near bark, centre and near pith. The testing was conducted based on grading method according to ASTM D 1666-87. Results indicated that *Elaeis guineensis Jacq* was 'good' easy to produce a satisfactory surface quality. Planing, boring, mortising, turning, sanding and moulding test showed good quality for both treatments (Grade: 2 or mean 2.24 and 2.27) results. The result also indicate treated OPL had good machining quality compare to untreated, and L1( near bark) shows much better at mean 2.3 grade machining properties compare the other's layers. A potential of ethanol as drying treatments shows a great potential because this technique can reduce machining defect and also drying defect.
