## **ACKNOWLEDGEMENT**

Alhamdulillah, foremost thanks to the Most Gracious and the Most Merciful, ALLAH S.W.T for giving me strength on successfully completing this project paper. All the praises and thanks to ALLAH S.W.T for giving me the times, wills, guidance, strengths and continuous good health and wealth which without His blessed I might have not complete this project paper during the given period.

Besides, this project paper will not successfully complete without cooperation from many parties. They have contributes a lots in preparing this project paper. I am thankful to many people who provide me the kind assistance or had contributed immensely to the success completion of this project paper in due time.

I wish to express my sincere gratefulness and gratitude to ***Miss Nadia Nurul Najwa binti Mohmad Hassan*** who act as my advisor and not forget my second examiner ***En. Syamsyul Samsudin*** for their patients, supports and guidance through-out the process of completing this project paper.

In conclusion, i would like to grab this opportunity to express my deepest appreciation for those who had contributed a great deal towards the completion of this project paper. I have learnt much about this subject. I wish to extend my appreciation to my family, especially to my parent for their moral support in completion this project paper.

Thanks You.

## **ABSTRACT**

This study attempts to examine the determinants public based construction companies' profitability in Malaysia. The construction industry has changed significantly over the last two decades due to the effects of globalization, delivery system innovations, increased competition, and the application of information technology. Industry professionals know that to strive in these times they need to manage their performance more efficiently and modify their business strategies to maintain and improve profitability and increase the company value. However, traditional theory and understanding of profitability management are not flexible and powerful enough to lead construction firms to a higher performance in the rapidly changing market. It has been a widespread and serious problem in the construction industry that profitability appears low, unreliable, and unmanageable. Thus, this study to analyze the profitability of construction companies in Malaysia. It use profitability (Dependent Variables), firm size, liquidity, leverage, total asset turnover and growth rate (Independent Variables). The data will use panel data for 10 years from 5 constructions companies in Malaysia.
