## SCALLOPCHAIR

### OCCASIONAL CHAIR (FURNITURE DESIGN)

Design Advisor : MR AHMAD FAZLAN AHMAD ZAMRI

This Occasional chair is based on a scallop shape. More other things about the scallop shell are consists of two similarly shaped valves with a straight hinge line along the top, devoid of teeth, and producing a pair of flat wings or "ears" (sometimes called "auricles", though this is also the term for two chambers in its heart) on either side of its midpoint, a feature which is unique to and apparent in all adult scallops.

These ears may be of similar size and shape, or the anterior ear may be somewhat larger (the posterior ear is never larger than the anterior one, an important feature for distinguishing which valve is which. After that characterized scallop too is by a large, well-developed central adductor muscle, the absence of a muscular foot, and by the two valves typically being fan-shaped, often with a radiating fluted pattern, and with flared wing-like projections on both sides of the straight hinge. After that, this occasional chair I was the design and it's called scallop chair because it I was take inspired by nature which is the scallop and each entire structure and the main body uses alloy metal and has been connected part by part until becoming one part and one main structure using the welding method.

This chair design is user friendly and ergonomic for any age who want to use and sit because no sharp part at the corners of the chair to avoid any injuries and has a cushion at the sitting place to make it more comfortable for those who are using this chair. colour for this chair is using oak wood colour, metal for whole body structure and red velvet colour used at cushion
