ACKNOWLEDGEMENT

Foremost, I am grateful and would like to express my sincere gratitude to my advisor, Madam Yuslizawati Binti Mohd Yusoff for his invaluable guidance, continuous encouragement and constant support in making this research possible. I really appreciate his guidance from the initial to the final level that enabled me to develop an understanding of this research thoroughly. Without his advice and assistance it would be a lot tougher to completion. I also sincerely thanks for the time spent proof and correcting my mistake.

I also would like to express very special thanks to Dr Syamsul Bin Syamuddin for her suggestion and co-operation especially in this study about Macroeconomic variable towards Gross Domestic Product in Malaysia. A special appreciation should be given to Dr Syamsul Bin Syamsuddin from Business Management Faculty whom which gave me brand new perception about relationship between Macroeconomic variable toward Gross Domestic Product in Malaysia.

I acknowledge my sincere indebtedness and gratitude to my parents for their love, dream and sacrifice throughout my life. I am really thankful for their sacrifice, patience, and understanding that were inevitable to make this work possible. Their sacrifice had inspired me from the day I learned how to read and write until what I have become now. I cannot find the appropriate words that could properly describe my appreciation for their devotion, support and faith in my ability to achieve my dream.

Lastly, I would like to thanks my person which contributes to my final year project directly or indirectly. I would like to acknowledge their comments and suggestions, which was crucial for the successful completion of this study.

Thank you.

ABSTRACT

This paper is made to find out about the impact of macroeconomic variables towards gross domestic product. By using secondary data for this analysis is retrieve from other journal, article and data stream. Sample data for this study selected from data stream on over fifteen years started from January 2001 to December 2015. The methodology used for this study is by using the Multiple Linear Regression with Eviews sourced from Data Stream. In this study, the dependent variable is gross domestic product, while independent variable is macroeconomic variables. Based on the variables, the purpose of the study is to investigate the impact between macroeconomic variables on the gross domestic product in Malaysia for fifteen years started from January 2001 until December 2015. In addition, this research like to explore the effect of macroeconomic variables examples inflation (CPI), interest rate (BLR), import and export to gross domestic product. The result indicates that there is co-integrated between the macroeconomic variables and gross domestic product. The result of this study is hoped to help investor, financial analyst and academician to identify the step that should be taken before make the decision about investment decisions.
