ACKNOWLEDGEMENT

First and foremost, Alhamdulillah and all praise to Allah Almighty for giving me the opportunity, strength and patience to fulfill this Academic Project requirement for the Bachelor of Business Administration (Honors) (Finance). His utmost blessings have made this entire final semester research possible within the allocated timeframe.

I would like to take this opportunity to convey my utmost gratitude to my Thesis Project's advisor, Sir Azfar Hilmi bin Baharudin for his massive inputs, guidelines and continuous support throughout the completion of this research. I would also like to express my deepest appreciation towards my thesis coordinator, Sir Syamsyul bin Samsudin for his guidance throughout the completion of this research. In addition, my heartfelt thanks are also extended to both my loving parents, family members and classmates for their unwavering contribution and invaluable counsel in helping me steering this research to greater heights.

Last but not least, I would like to thank everyone who have supported, helped and worked together directly or indirectly in assisting me realizing this research on time, the cooperation given is well appreciated and will always be remembered. Thank you.

ABSTRACT

Malaysia like most developing countries of the world relies substantially on various factors that may affect the economic growth. This study examines the interaction of commodity and liberalization towards the economic development in Malaysia where an increase commodity and liberalization factors will automatically influence the economic development and on the other hand decline in the rate of economic growth will weakens the economic development in Malaysia. The econometrics model has been constructed by using the Ordinary Least Square (OLS) method is used in order to analyze the effect of Oil Rents, Openness to trade, and Foreign Direct Investment towards the Malaysia economy growth. The regression analysis is carried out by using linear model. The data is collected by using the World Data system in World Bank and there are 4 potential variables used to achieve these objectives which are Gross Domestic Product (GDP), Oil Rents (OILRENT), Openness to Trade (TRADE), and Foreign Direct Investment (FDI). The data period covers from 1970 until 2014. The findings are Oil Rents and Openness to Trade has positive significant effects on economic growth in Malaysia instead of Foreign Direct Investment shows negative significant effect towards economic growth in Malaysia.

Key words: Malaysia, Economic growth, Inflation, Foreign Direct Investment, Openness to Trade, OLS.
