## ABSTRACT

Mismatch in the demand and supply of housing has been a worldwide concern. While many countries have suffered from the housing shortage, housing surplus also generates equally substantial problems. The circumstance of property overhang in Malaysia is getting serious and serious in the few past years which is leads the property market into a dilemma. The reasons for the unexpected overhang and unsold housing scheme have been posited to include inconvenient locations, unattractive physical characteristics of the housing, pricing, and unfavorable financial arrangements in the transaction process. In densely developed urban housing scheme settings, it is reported that green amenities such as parks and open spaces play an important role in creating a pleasant living environment. Urban living has its necessities but living in an eco-friendly neighbourhood provides a way for us to achieve a balance between both tangents. However, the housing scheme which uses the green home concept or eco-friendly is still new among Malaysian citizens, they do not understand the benefits and concept of the green home. The benefits of living in eco-friendly housing do not only do it improve our health but it also helps with the health of the environment as well. Buying a house is a major decision that homebuyers will make because expenditure on homeownership has an influence on the homeowner's quality of life. Therefore, this research aims to explore the homebuyer's attitudes in purchasing a green home by outlining 3 objectives namely 1) To identify factors influencing homebuyers' attitudes in purchasing a green home concept 2) To analyse the significant factors influencing homebuyers' attitudes in purchasing a green home concept. 3) To recommend a framework for factors influencing homebuyers' attitudes in purchasing a green home concept. This research applied a case study approach involving a selected area in Kinta District, especially in Ipoh. A survey questionnaire with closed-ended questionnaire was distributed to 300 respondents. Data from the questionnaire were analysed quantitatively by using inferential analyses (CFA analysis). The findings have revealed, there are 34 attributes out of 54 are significant factors influencing the homebuyer's attitudes in purchasing a green home concept while these variables are illustrated by recommended the framework of significant factors influencing homebuyers in purchasing a green home. The framework will be significant in promoting green home development and enhancing economic growth.

## ACKNOWLEDGEMENT

First of all, I wish to thank God for giving me the opportunity to embark on my MSc and for completing this long and challenging journey successfully. My gratitude and thanks go to all parties who have guided and helped me throughout the duration of the time until the completion of this thesis.

I would like to express my deep and sincere gratitude to my supervisors, Associate Professor Dr. Thuraiya Binti Mohd and Dr. Suwaibatul Islamiah Binti Abdullah Sani, who had been guiding me patiently from the very beginning until the completion of this thesis. Their intelligent guidance and advice facilitated and assisted me. Without their supervision, I may not be able to complete my thesis in the time given.

Furthermore, I would like to thank all the respondents for supporting me in answering my survey. Thank you for all the cooperation that you have given me. Besides that, I want to thank my family, especially my husband, my kids, my father and my mother, my siblings, and also friends who have given me their support and encouragement throughout my study.

Last but not least, I regret that I am unable to mention everyone by name especially those who have helped me in conducting this research project. Therefore, by using this platform, I especially want to thank all these people.
