## **ACKNOWLEDGEMENT**

In the name of Allah, the Most Gracious and the Most Merciful, In the name of God, Most Gracious, Most Merciful. All praise be to God and His bounty for being able to complete the final phase of this project. I am thankful to God for all the opportunities, challenges, and strengths that have been poured into me to complete the final of this project. I experienced a lot throughout this process, not just from an academic aspect but also from a personality aspect. My deepest gratitude is to Rasulullah Muhammad (peace be upon him), whose way of life has been a constant guide for me. First and foremost, I'd like to express my gratitude to my supervisor, Ts. Dr. Ismassabah Binti Ismail, for her guidance, understanding, and patience in completing this project. My deepest appreciation goes to both my parents and friends who have given me support. May Allah bestow success and glory on the individuals.

## **ABSTRACT**

The Batik online purchasing system employs a business-to-consumer method. Batik Raihan's online purchasing method makes it easier for them to serve clients. Batik Raihan still conducts business using conventional methods for transactional activity. The system includes a product catalog with information. The Batik Raihan Online Shopping System was built using the Adapted Waterfall Model and E-CRM theory. E-CRM improves client relations by making processes more efficient. The system will be built using the phases of the Modified Waterfall Model. This ensures that the process runs smoothly and efficiently. Furthermore, the project has been easily modified, with more modules added to accommodate the programming languages utilized, such as PHP, HTML, and SQL. Following that, research testing methods for testing the functionality of the online buying system. Ultimately, the system will serve to speed up the sales process, maintain data operational, and contribute to the organization's overall performance. As a result, this system has complete control over a business's operations.
