ACKNOWLEDGEMENT

This study is dedicated to all those who gave me just the kind of support and confidence I needed in my study namely:

Jazuri Abdullah and Muhammad Hafeez, my colleagues, who spent so much of their precious time tirelessly helping me through the months, providing me moral support throughout the reserach process, as well as technical assistance critical for the completion of the study in a timely manner and I wish to acknowledge the debt I owe them with a million thanks;

Next, I would like to thank Mohd Khairolden Ghani, my colleague who is working at Construction research Institute of Malaysia (CREAM), for his continuous guidance, encouragement, working together, sharing information and helping each other when needed in order to complete this study.

My special thanks go to all the personnel in the Construction Industry Development Board Malaysia (CIDB) for welcoming me to their office, whenever I need their professional advice, sources for this study and without their help my study would never been possible.

And finally, a special dedication to every member of my beloved family who endured this long process with me, always offering support and love.
