ABSTRACT

GLCs have established as the backbone of the Malaysian economy. GLCs have significant role in the sectors such as telecommunications, public transport, airlines, banking and financial institutions. As the Government is aiming towards a strong, efficient and more resilient force for GLCs to face future competition in the business world, the Government-Linked Companies Transformation (GLCT) programme was introduced in May 2004. In relation to the performance of GLCs, this study investigates the relationship between procurement cost management and efficiency in GLCs. Therefore, two methodologies were employed in this study. First methodology is the Data Envelopment Analysis (DEA) to scrutinise the three types of efficiency; Technical Efficiency (TE), Pure Technical Efficiency (PTE) and Scale Efficiency (SE). this type of efficiencies are then the dependent variable for this study. Then, panel data analysis was adopted by using the Generalised Method-of-Moment (GMM) estimator. The proxies for procurement cost management are Total Asset Turnover (TATO), Fixed Asset Turnover (FATO), Inventory Turnover (ITO), Accounts Receivable Turnover (ARTO), Capital Expenditure (CAPEX) and Operational Expenditure (OPEX). The study determines to find the significant relationship between TATO, FATO, ITO, ARTO, CAPEX and OPEX with TE, PTE and SE. For PTE, only ITO has positive relationship. The rest of the proxies have negative relationship. When it comes to SE, FATO has negative relationship with SE but other proxies have positive relationship with SE. For this study, TCO as one of the management accounting tools act a moderating variable to indicate the relationship between procurement cost management and efficiency. TCO has a significant positive impact on the relationship between TATO, FATO, ITO, ARTO and OPEX and TE. In relation to PTE, the same goes to TATO, FATO, ITO, and ARTO. Meanwhile for SE, only TATO, ARTO, CAPEX and OPEX have significant positive relationship with it. As for conclusion, the presence of TCO has increase slightly the efficiency of GLCs. For the three types of efficiency, the best indicator for the efficiency of GLCs is TE. Nevertheless, since the SE score is lowest, it was proven that GLCs have to give more focus on their operation rather than their management wise. Due to that, giving focus to the procurement is one of the most important in increasing the performance of the GLCs as a whole.

ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and the Most Merciful.

Alhamdulillah, all praises to Allah for the strengths, opportunities and His blessing to let me embark on my PhD and complete this lengthy and challenging journey successfully. I would never be able to finish my thesis without support, strength and guidance from those people around me since the beginning of my PhD journey until the end.

First and foremost, I would like to express my sincerest appreciation and gratitude to my supervisor, Assoc. Prof. Dr Jaafar Pyeman for his endless supervision, patience, motivation, invaluable advice, feedbacks, enthusiasm and immense knowledge to help me finishing my study. My appreciation also goes to my cosupervisor, Assoc. Prof. Dr Norziation Ismail Khan, for her support and guidance in light of this research interest. I am truly grateful and feel indebted to have them along my PhD journey. All their good will only be rewarded by Allah, Inshaa Allah.

My highest appreciation also goes to Dr Elya Nabila Abdul Bahri, who is my personal tutor, who ceaselessly provide me with guidance regardless of time. Her sincerity can only be rewarded by Allah. Not only that, thanks to all individuals who have guided me direct or indirectly in completing this thesis.

Besides, I would like to give my infinite appreciation goes to my late father, Abdul Rahman bin Salleh, who had given his full support throughout my time pursuing this PhD. "Abah, I know you are very proud of me even there is no word come out of your mouth". May he be placed in the highest Jannah, ameen. To my beloved mother, Salmi binti Manap, thank you very much for your utmost love, support, understanding and prayers throughout my life especially during my PhD journey. For my siblings, thank you very much for your support and encouragement.

Finally, to my very best friend, Dr Mohamad Aznillah Ahmad, who never fails to provide his full support, encouragement and guidance along this long journey. Thank you for always being with me, being patient with my behaviour and never stop keep believing in me. You have truly inspired me to not only pursue PhD, but also shed the light in career path. May your life will always under His blessing.

Finally, this thesis is dedicated to all who are involved directly or indirectly in my PhD journey, for your vision and determination to keep searching for knowledge, this piece of victory is dedicated to all of you. Alhamdulillah.
