## ABSTRACT

Transient Receptor Potential Canonical (TRPC) channel was the first group of TRP homologs that was cloned in mammals. The channel consists of seven subfamily members in this family. TRPC4 channels are nonselective cation channels permeable to  $\text{Ca}^{2+}$  that are expressed in various organs and cell types including numerous types of neurons, cardiovascular system, skeletal muscle cells, kidney, and immune cells. TRPC4 channels assemble into a tetrameric structure in the plasma membrane. The S4-S5 linker of TRPC4 has been shown to regulate the open-close of the channel by interacting with the S6 helix. Previous homology models that were built based on the potassium channel structure predicted inter-domain interactions were formed by G503 and the S623 between the linker with the S6 helix. Mutagenesis experiments of TRPC4 and TRPC5 supported that the mutation of the conserved glycine impaired the interaction, which resulted to the channel opening, and causing cell death due to the influx of  $\text{Ca}^{2+}$ . In this work, a tetrameric model of TRPC4 was built based on TRPV1 EM structure to study the role of S4-S5 linker in the channel gating. Molecular dynamics simulations were employed to describe the dynamics of the structure in a lipid bilayer environment. The simulations of both TRPC4 and TRPV1 native structures support the proposed interactions between the S4-S5 linker and the S6 helix. However, it was observed that D515 in the linker region formed hydrogen bonds with S623 during the simulation time. Similarly, in the TRPV1 simulations, D576 formed stable interactions with T685 in the S6 helix. Interestingly, simulations of TRPC4<sub>G503S</sub> mutant caused the selectivity filter region of the channel to open wider, while TRPC4<sub>G503/S623A</sub> mutant resulted to the channel conformation back as the native structure. Additionally, S508 and Y624 from S4-S5 linker and S6 helix formed hydrogen bonds during those mutant simulations. The thesis findings suggest the predicted residues in S4-S5 linker play a role in the channel conformation and function.

## ACKNOWLEDGEMENT

All praise is due to Allah, the Creator and Sustainer of the Universe for guiding me to conceptualize, develop and complete the thesis. Indeed, without His Help and Will, nothing is accomplished.

I would like to express my deep and sincere gratitude to my main supervisor, Dr. Siti Azma Jusoh, Faculty of Pharmacy, Universiti Teknologi MARA, Puncak Alam Campus, Malaysia. Her wide knowledge and her logical way of thinking have been of great value for me. Her understanding, encouraging and personal guidance have provided a good basis for the present thesis.

I am deeply grateful to the Bioinformatic Units members, Dr. Ruzianisra Mohamed, Pn. Zafirah Liyana Abdullah, Nurul Azira Ismail, Mohd Yasser Nayan, Mohd. Naim Fadhli and Sakinah Mat Zin. Their valuable advice and friendly help have made me accomplished my extensive discussions around my work and interesting explorations in operations for this study.

I wish to express my warm and sincere thanks to all the lecturers in Faculty of Pharmacy, Universiti Teknologi MARA, Puncak Alam Campus, Malaysia, for their constructive comments and their important supports throughout this work. Charismatic and intellectual academicians of Universiti Teknologi MARA, Puncak Alam Campus have helped me in understanding clearly the concept of research, education and its methodology. Their idea and concepts have had a remarkable influence on my entire work and that has been most worthwhile, when comprehending a concept and conducting research as my goal to be a professional researcher at an academic or research-oriented organization in the future.

I owe my loving thanks especially to my beloved husband, Muhammad Fakharrur Razi Abdul Kadir and my lovely daughter, Safiyyah Maisarah. They gave me untiring help during my difficult moments. Their kind support and love have been of great value in this study. My most sincere gratitude is due to my family and my family in-laws. Without their encouragement and understanding, it would have been impossible for me to finish this work.

The financial support of the Universiti Teknologi MARA Malaysia and MyBrain15 from Ministry of Higher Education Malaysia is gratefully acknowledged.
