ACKNOWLEDGEMENTS

All Praises and Thanks to Allah SWT for giving me the strength and generosity to complete this research successfully. Next, we are very grateful and would like to express our sincere gratitude to Mr. Azdi Bin Maasar, our MSP 660 lecturer and our supervisor Dr. Siti Salwana Binti Mamat for their invaluable guidance, continuous encouragement and constant support in making this research possible. We really appreciate their guidance from the initial to the final level that enable us to develop and gain knowledge of this project thoroughly. We also sincerely thanked for time spent proofreading and correcting our mistakes.

Our sincerest gratitude to our beloved parents for their love, dream and supports throughout this journey. We are really thankful for their sacrifice, patience and understanding that were priceless to make this research possible. Their sacrifice had inspired me from the day we learned how to read and write until what we have become now. We cannot find the appropriate words that could properly describe my appreciation for their devotion, support, and faith in my ability to achieve our dreams.

Last but not least, our sincere thanks go to all friends who helped us in many ways and made my education journey pleasant and unforgettable. This semester where we had experienced with all of you guys will be remembered as an important memory for us to face the new chapter in our life later on.

TABLE OF CONTENTS

ACKNOWLEDGEMENTS	i
LIST OF TABLES	iv
LIST OF FIGURES	v
ABSTRACT	vi
CHAPTER 1	1
INTRODUCTION	1
1.1 Introduction	1
1.2 Problem Statement	2
1.3 Objectives.....	3
1.4 Significance and Benefit of The Study	3
1.5 Scope of The Study	3
1.6 Definition of Terms and Abbreviations	3
CHAPTER 2	5
BACKGROUND THEORY AND LITERATURE REVIEW	5
2.1 Analytic Hierarchy Process	5
2.2 Potential Method	10
CHAPTER 3	12
METHODOLOGY AND IMPLEMENTATION	12
3.1 Overview of case study	12
3.2 Potential Method	13
3.3 Implementation.....	15
3.3.1 Criteria.....	16
3.3.2 Sub criteria weight with respect to C1 weight	19
3.3.3 Sub criteria weight with respect to C2 weight	20
3.3.4 Sub criteria weight with respect to C3 weight	21
3.3.5 Alternatives weight with respect to S1 Weights	22
3.3.6 Alternatives weight with respect to S2 Weights	23
3.3.7 Alternatives weight with respect to SPB Weights	24
3.3.8 Alternatives weight with respect to DSC Weights.....	25
3.3.9 Alternatives weight with respect to ST weights.....	26

3.3.10 Alternatives weight with respect to D weights.....	27
3.3.11 Alternatives weight with respect to T weights	28
CHAPTER 4	29
RESULTS AND DISCUSSION	29
CHAPTER 5	32
CONCLUSION AND RECOMMENDATIONS	32
5.1 Conclusion.....	32
5.2 Recommendation.....	32

APPENDIX C (Pairwise Comparison: Alternatives)	47

ABSTRACT

MCDM is a process of making decisions when several factors must be considered simultaneously to rank potential alternatives. To achieve goal, decision must be made, and correct decision can lessen the complexities and uncertainties of the outcomes. There are a lot of tools under MCDM, where AHP and PM are amongst them. However, PM is easily understood as it includes a graphical representation.

A case study titled “Use of AHP in decision-making for machine tool configuration for special purpose machines” (Farhan et al., 2016) shows that four levels of hierarchy structures was assessed and the necessary criteria and subcriteria were identified and used in the develop model. Then pairwise comparison matrices were created for each level to compute the weights for the alternatives. From the result obtained in the previous case study, we applied the potential method and created our own case study based on the use of PM.

In PM, there are seven steps that are needed to be carried out. We followed all the steps to rank all the sub-criteria and alternatives. The results obtained for the global weight are derived from the local weight of the comparison matrix of sub-criteria with respect to criteria. The result of global weightage ranking A5 as the most preferred alternative, A3 is the second most preferred alternative, A1 is the third most preferred alternative and A2, A4, A6 have the same rank making them the lowest preferred alternatives. The ranking of the alternatives obtained from this case study is exactly same as in the case study using AHP. We can conclude that PM can also be used in machine tool configuration of the special purpose machine with addition of graphical representation.
