## **CHAPTER 3**

### **ANALYSIS OF TASK**

#### **3.0 INTRODUCTION**

This chapter will focus on the analysis the background, implementation principles and system phase of Government Employees Management System (GEMS). Furthermore, I will elaborate further on its advantages and limitations. Lastly to demonstrates a reflection of my own thought during my tenure as the administrator for the system.

#### **3.1 TASK ANALYSIS**

The Government Employees Management System (GEMS) is a state-wide interconnected enterprise solution that will harmonise and standardise the human resource (HR) management procedures of the Sarawak State Government. The ultimate long term goal of GEMS are to cater the whole range of HR processes, from Entry to Exit and all processes feed into and take from the same set of data in one database system. The sole repository of HR data is to integrate with or linked to all e-Government applications and portals that uses HR data.

##### **3.1.1 IMPLEMENTATION PRINCIPLES**

- i. **MODULAR** - To control rectification of errors and data integrity. If too much is implemented at one time, it will be very difficult to pinpoint the problems and rectifications. After each module, time will be given to stabilise data (i.e. data cleaning) before going on to next module(s). As an aside: In the first version of HRMIS, they implement too many modules at once in no particular sequence. For
