

# **MODELING OF THE THREE PHASE DISTRIBUTION INDUSTRIAL NETWORK USING MATLAB/SIMULINK**

This Project Report is presented in partial fulfillment for the award of the  
Bachelor of Electrical Engineering (Hons.)  
**UNIVERSITI TEKNOLOGI MARA**

**MASHIRWAN BIN SHAFF'I**  
**FACULTY OF ELECTRICAL ENGINEERING**  
**UNIVERSITI TEKNOLOGI MARA**  
**40450 SHAH ALAM, SELANGOR.**

## **ACKNOWLEDGEMENT**

In the name of ALLAH the merciful and with the help of ALLAH. All good aspiration's devotions, good expressions and prayers are to ALLAH whose blessing and guidance have helped me throughout entire project.

The success of this project was due in part to various personnel involved directly or indirectly at the each of every stage. My heartiest thank and appreciation to Professor Madya Mohd. Zaki bin Abdullah for this valuable guidance, comment and ideas toward the success of this project.

My special appreciation also goes to Mr. Razali and Mr. Ahmad Farid bin Abidin who gave me valuable information and helping hand for completion of this project.

My gratitude also goes to my beloved parents (Shafi'i bin Sudarno and Masripah bte Hj. Hamzah), who always give me undivided support in everythings. Without them I'm nothing. Special thanks, I would like to convey especially to my friends, my colleagues and to all who have been supportive and for giving me courage, comfort and advice during the course of this project.

## **ABSTRACT**

Harmonic distortion is not a new phenomenon. Concern over harmonic distortion emerged during the early history of ac power systems. Widespread applications of power electronic-based loads continue to increase concerns over harmonic distortion. Harmonic problems have sparked research that has led to much of the present-day understanding of power quality problems.

This thesis illustrates the use of the Power System Blockset (PSB), dedicated to the simulation of power systems harmonics using the Matlab Simulator (SIMULINK). The PSB was used in modeling the distribution system components, power electronics devices and drives. In this work it is proposed to design of the three phase industrial network for power quality and harmonic analysis, whereby focused on the point of common coupling (PCC). In this work it is proposed to investigate on current and voltage distortion characteristic at PCC, which measurement taken in various load connected. The Total Harmonic Distortion (THD) measurement collected from the harmonic data analysis.

# TABLE OF CONTENTS

<b>CHAPTER</b>	<b>DESCRIPTION</b>	<b>PAGE</b>
1	INTRODUCTION	
	1.1 Power Quality	1
	1.2 Power Electronic simulation Concept	2
	1.3 Power System Blockset	2
	1.4 Model of The Network	3
	1.5 Scope of The Thesis	4
2	LITERATURE REVIEW	
	2.1 Introduction	6
	2.2 Three-Phase Rectifiers	6
	2.3 The Thyristor Converter	8
	2.4 The Rectifier Feeding RC Load	9
3	HARMONICS	
	3.1 Introduction	11
	3.2 Harmonic Distortion	13
	3.3 Harmonic Sequence	15
	3.4 Harmonic Effects	17
	3.4.1 Effect on power system components	18
	3.4.2 Effect on telecommunication systems	19
	3.5 Practical Effects	21
	3.6 Sources of Harmonics	22
	3.6.1 Rectifier	23
	3.6.2 Switched-mode Power Supplies	24
	3.6.3 Fluorescent ballasts	24
	3.7 Total Harmonic Distortion	24

<b>CHAPTER</b>	<b>DESCRIPTION</b>	<b>PAGE</b>
4	HARMONIC CURRENT	
	4.1 Introduction	26
	4.2 Harmonic Current Distortion Limits	27
	4.3 Harmonic Current Flow	29
	4.3 Detection of The Harmonic Currents and It's Flow	31
5	SIMULATION	
	5.1 Simulation System	33
	5.2 Diagram of The Three-Phase System	34
	5.3 Circuit Waveforms	37
6	RESULTS	
	6.1 Current Total Harmonic Distortion (THD)	41
	6.2 Input Current Waveform	42
	6.3 Combination of Nonlinear Loads in Current Analysis	46
	6.4 Voltage Total harmonic Distortion (THD)	48
	6.5 Input Voltage Waveform	49
	6.6 Combination of Nonlinear Loads in Voltage Analysis	53
7	DISCUSSION	55
8	CONCLUSION	57
	REFERENCES	59
	APPENDIX A	
	APPENDIX B
