

**VECTOR-CONTROLLED STRATEGIES FOR THREE PHASE
INDUCTION MOTOR DRIVE SYSTEM**

Thesis presented in partial fulfillment for the award of the

Bachelor of Electrical Engineering (Honours)

UNIVERSITI TEKNOLOGI MARA

MALAYSIA

AZLINAWATI BINTI SU'UDI

2003342709

B. ENG (Hons.) ELECTRICAL

Faculty of Electrical Engineering

UNIVERSITI TEKNOLOGI MARA (UiTM)

Shah Alam, Selangor Darul Ehsan

ACKNOWLEDGEMENT

In the name of Allah S.W.T., the Most Beneficent, the Most Merciful. Foremost, all praise to Allah for the entire incredible gift endowed upon me and for giving me the health and strength to complete this final project.

I would like to take this opportunity to express my most grateful appreciation to my supervisor En. Mohamad Fauzi bin Omar for his guidance, advice and willing in sharing the knowledge towards the completion of this final project.

Special thanks to Dr Chan Sei and Mr. Mustapha Kamal Hamzah who act as a panel and willing to spent their golden time to evaluate my project.

Thousands thanks and lovely appreciation to my beloved parents, En Su'udi Bin Haji Anis and [REDACTED] for their financial support, prayers, expectations and encourage that has enable me to succeed. I would like to express my gratitude sincere appreciation especially for my beloved friend En Zulkeflie Bin Damanhuri for his special support and encouragements. I would also like to express my gratitude to friends and housemate who were in involved in this progression of this final project. Also thanks to everyone who has contributed either directly or indirectly throughout the preparation of this thesis and this project.

“May Allah bless and reward them for their generosity”

ABSTRACT

This paper investigates the vector control of a 3 phase induction motor drive to implement low-cost systems for low-power application. The vector control is based upon field orientation concepts that have been adapted for this type of machine. A part of the control systems is implemented by PI controller. The implementation of vector-control techniques has enabled induction motor drives to be used for high dynamic performance applications. In this control scheme, a d-q coordinates reference frame locked to the rotor flux space vector is used to achieve decoupling between the motor flux and torque. They can thus be controlled separately by stator direct-axis current and quadrature-axis current respectively. All simulation was done using MATLAB and Simulink version 7.0.

VECTOR-CONTROLLED STRATEGIES FOR THREE PHASE INDUCTION MOTOR DRIVE SYSTEM

TABLE OF CONTENTS

CHAPTER	DESCRIPTION	PAGE
1	INTRODUCTION	
	1.1 Introduction	1
	1.2 Objectives	2
	1.3 Scope of project	3
	1.4 Organization of the Thesis	3
2	LITERATURE REVIEW	
	2.1 Introduction	5
	2.2 Induction Motor	5
	2.2.1 Induction Motor Construction	6
	2.3 MATLAB Software	8

CHAPTER	DESCRIPTION	PAGE
3	THE MODELING FOR VECTOR CONTROL OF AN INDUCTION MOTOR DRIVES SYSTEM	
3.1	Introduction	10
3.2	Modeling of the Induction Motor	10
3.2.1	Single phase Induction Motor Circuit Diagram	10
3.2.2	Derivation of the motor-torque Speed characteristic	12
3.2.3	Induction motor dimension	16
3.2.4	Analysis of the parameter for Single phase induction motor	17
3.3	Modeling of the vector control drive	20
3.3.1	Direct axis current, I_{DS} calculation	22
3.3.2	Rotor flux Calculation	23
3.3.3	Stator Quadrature axis current, I_{QS}	24
3.3.4	DQ-dq-abc transformation	24
3.3.5	Proportional Integral Controller	26
3.3.6	Hysteresis Current Controller (HC)	27
3.3.7	Insulated Gate Bipolar Transistor (IGBT)	28
4	METHODOLOGY	
4.1	Introduction	30
4.2	Procedure for developing the modeling for vector control of an Induction Motor drives system	30
4.2.1	Direct axis current, I_{DS} calculation blockset	32
