## ACKNOWLEDGEMENT

All praise and glory to Almighty Allah (S.W.T.) who gave me courage and patience to carry out this thesis. Peace and blessing of Allah be upon last Prophet Muhammad.

I would like to express my deepest gratitude to my advisor, Pn. Shahreena for her excellent guidance, caring, patience and the support during the whole period of completing this thesis. I also would like to delegate my special thanks especially to my industrial training supervisor, Mr Richard and all staff at Malaysian Motor Insurance Pool (MMIP) for their assistance and continuous guidance. Thank you very much for giving me the opportunities and full supports during my internship. I have learned many new things and gain many invaluable experience during my stint at MMIP.

Last but not least, I warmly thank to my parents,                    and                    and also my siblings for the spiritual support in all aspects of my life. I also would like to thank to all my classmates for the assistance in numerous ways and the help and support from all persons who were directly and indirectly involved in my thesis.

Thank you.

Nurul Syazwani Binti Abdul Azis

## ABSTRACT

Recent financial crisis raised the issue of understanding the liquidity risk of financial assets and institutions. In this study, the research is focusing on the banks' performance based on liquidity risk analysis. The purpose of the study is to study the relationship between dependent variable and independent variable and identify which factor has the most significant influence towards the movement of banks' capital. The dependent variable is Banks' Capital meanwhile the independent variable are Deposit, Cash and Non-Performing Loan. This study use secondary data from 2010 to 2014 (monthly) from report Bank Negara Malaysia (BNM). The data is tested using Single Linear Regression and Multiple Linear Regression.
