

**SOLVING THE HYDROTHERMAL COORDINATION
PROBLEM USING AN ARTIFICIAL IMMUNE SYSTEM
METHOD**

**Thesis presented in partial fulfillment for the award of the
Bachelor in Electrical Engineering (Hons)
UNIVERSITI TEKNOLOGI MARA**

**MOHD HAFIZAN BIN ZAINI
Faculty of Electrical Engineering
40450 Shah Alam, Malaysia
NOVEMBER 2006**

AKNOWLEDGEMENT

In the name of Allah S.A.W the most gracious and the most merciful. All praise to Allah S.A.W for the strength, ability, and patience to complete this electrical project.

I would like to express my deepest gratitude and thanks to my dearest project supervisor Prof. Madya Dr. Titik Khawa bte Abd. Rahman for her supports, guidance invaluable suggestion, and concern to make this special project a success.

Special thanks to my family especially my mother and sisters to her concern and support for the material and almost spiritual.

I would like to thanks to all my beloved friends especially who also under same supervisor for their useful comments, helps and contributions.

Finally yet importantly, it is to be my pleasure and hope to have this project report as guidance for future students.

ABSTRACT

Biological system such as Artificial Immune System (AIS) regarded as sophisticated information processing systems and expected to provide inspiration for various ideas to science and engineering. This report presents a short-term hydrothermal coordination (SHC) scheduling solution using the AIS method. The main idea is to minimize cost generation while maintaining the system within its constraints limit. The developed Artificial Immune System optimization technique used the total generation cost as the objective function and represented as affinity measure. Through genetic evolution, the antibodies with high affinity measure were produce and become the solution. The proposed method has been test on three generations units system and the results given converge.
