ACKNOWLEDGEMENTS

I would like to thank my supervisor, Pn. Nursuriati Jamil for providing much-needed, patient guidance throughout the course of this research project. Her expert advice proved invaluable in making sure I kept to the focus of the study and avoided the pitfalls which I may have ignored.

I would also like to thank Jorn Barger of the Robot Wisdom Pages for his views on story generation. His insights on possible techniques and the applications of story generation greatly influenced the course of this study.

Finally, my thanks go to my brother who was willing to have all sorts of strange ideas thrown at him. I very much appreciated his feedback regarding the design of my program and his opinions on the future of story generation.

ABSTRACT

Storytelling has been a very important human activity since the development of language. We tell and receive stories everyday in the form of poems, novels, movies, songs and plays. Story generation attempts to mimic computationally-achievable aspects of human storytelling in order to create programs that can tell stories. The benefits are numerous: more immersive games, interactive fiction, computer-assisted art and even contributing towards the development of a true artificial intelligence. This study aims to combine findings from literary theory with story generation algorithms in order to investigate computer-based storytelling. After examining the methods of story generation employed by three major programs (Talespin, Gameworld and Erasmatron) a hybrid character-driven method was chosen for implementation in a model program called *Crooks*. The program also includes some insights gleaned from literature theory (namely Georges Polti's theories) to help create more complete stories. The output from *Crooks* consists of the character interactions that form the foundation or plot of a mystery story. The output from *Crooks*, varying according to the program's initial variables, demonstrates that computerized story generation is possible. An artificial author's works may never compare to the literary gems of human authors like William Shakespeare and James Joyce, but its utility cannot be denied.

TABLE OF CONTENTS

DECLARATION		iii
ACKNOWLEDGEMENTS		iv
ABSTRACT		v
ABSTRAK		vi
TABLE OF CONTENTS		vii
LIST OF FIGURES		ix
LIST OF TABLES		x
CHAPTER ONE	INTRODUCTION	
1.1	Problem Description	2
1.2	Objectives	2
1.3	Scope	3
1.4	Benefits	4
CHAPTER TWO	LITERATURE REVIEW	
2.1	Storytelling And Literary Theory	6
2.2	Approaches To Story Generation	13
2.2.1	Talespin	13
2.2.2	Gameworld	15
2.2.3	Erasmatron	21
CHAPTER THREE	METHODOLOGY	
3.1	Definition Of Methodology	28
3.2	Research	29
3.3	Analysis of Story Generation Methods	31
3.4	Model Program Design	33
3.5	Model Program Implementation	44

CHAPTER FOUR	RESULTS	
4.1	Program Output	47
4.2	Story Outline One	47
4.3	Story Outline Two	51
4.4	Variability	56
CHAPTER FIVE	CONCLUSION	
5.1	Success Of Story Generation	57
5.2	Future Developments	58
