ACKNOWLEDGEMENT

I would like to thank to my supervisor, Dr. Nursuriati binti Jamil as an advisor to my research project and give me a chance to learn and explore more about image processing that I think a quite tough field. The appreciation is for the advices and lessons in class in order to give a guidance about the new things that related with this research project.

I also would like to thank to Mrs. Ros Surya Taher as a guidance to my research project where she put so much effort to guide me and try to makes me understand about the research topic. The acknowledgement is also for the wasting time that she put a lot to me in order to give a best performance as a guidance and to makes me fulfill my research requirements.

My acknowledgement is also to Mrs. Suzana Baharudin for her guidance in research proposal steps. The appreciation is also for her kind hearted to guide and create a friendly atmosphere in a lesson class for every discussion about the research.

I would like to give thanks to Mr. Mohd Yunus Mohd Yusoff who try to help me in giving a lecture about what should have in the research project and how to do it in a better way. The thanks is for his kind hearted and for his willing to spend his time with me and my classmate.

I would like to give my appreciation to my classmate and members that give me so much support and help me in completing this research project directly or indirectly with the discussion that we had along the research development process. The appreciation is also for my best friend, Norbaidah binti Zaini where she is the one who help me a lot in giving an idea and opinions in order to completing this research project by mentally and phisically.

Special thanks to my mother who always give me an inspiration to develop and completing this research project and the one who is always praying for my sake along this whole time.

ABSTRACT

POOR DNA FINGERPRINT IMAGE ENHANCEMENT USING ADAPTIVE CONTRAST ENHANCEMENT

This paper describes about a poor DNA fingerprint image enhancement using Adaptive Contrast Enhancement (ACE). This technique is used for this DNA fingerprint image in order to get a better and clearer image. It will stretch the details in dark areas and improving overall contrast in brighter areas of an image. The image has to be converted into grayscale image first before enhance it. Several processes has to be go through in order to get the result which is dividing the histogram of the luminance into dark, mid and bright areas, the regions processed independently by using Histogram Equalization, toned down the image depending on the shape of each region and taking a weighted average of the input with the Histogram Equalization output. The result will be the histogram of the image is stretching wisely and the contrast of an image is good where the dark areas stretch the details of an image nicely and the bright areas improved.

ACKNOWLEDGEMENT	iii
ABSTRACT	iv
TABLE OF CONTENTS	v
LIST OF FIGURES	vi
LIST OF TABLES	vii
CHAPTER 1: INTRODUCTION	1
1.1 Project Background	1
1.2 Problem Statement	2
1.3 Project Scope	3
1.4 Project Objectives	3
1.5 Significance of the Project	3
CHAPTER 2: LITERATURE REVIEW	5
2.1 Introduction	5
2.2 Digital Image Processing	5
2.2.1 Image Enhancement	7
2.2.1.1 Contrast Stretching	8
2.2.1.2 Histogram Equalization	9
2.2.1.3 Weighted Average	13

2.2.1.4 Adaptive Contrast Enhancement	14
2.3 DNA Fingerprint Image	15
2.4 Conclusion	16
CHAPTER 3: METHADODOLOGY	17
3.1 Introduction	17
3.2 Research Methodology Process	17
3.2.1 Image Acquisition and Analysis	18
3.2.2 Development of Image Enhancement prototype	19
3.2.2.1 Proposed Algorithm	19
3.2.2.2 The Development	20
3.2.2.2.1 Designing Interface	21
3.2.2.2.2 The Implementation	21
3.2.3 Evaluation	24
CHAPTER 4: RESULT AND FINDINGS	26
4.1 Introduction	26
4.2 Results	26
4.3 Findings	30
CHAPTER 5: CONCLUSION	31
5.1 Introduction	31
5.2 The Conclusion	31
