ACKNOWLEDGEMENT

We would like to take this opportunity to express our appreciation to those who have contributed directly and indirectly towards the completion of this project.

First we would like to thank Cikgu Norlaila, of SK Seksyen 9, Shah Alam, Selangor for giving us the permission to do the surveys.

Gratitude is also extended to our colleagues from Department of Computer Science and last but not least, our warmest appreciation to our families for their understanding and support.

ABSTRACT

Reading comprehension is not an easy task especially for young readers. Due to this, the best way to simplify reading comprehension is to utilize the versatile possibilities of the computer and to expand the useful state of the art of multimedia technology. Therefore a learning strategy using 3D animation will be produced. A framework will first be developed by concentrating on reading comprehension practice namely narrative, descriptive, factual and dialogues. The sources of the proposed framework are based on Gagne's Model, Gestalt Theory and Online Instruction by Kolbo & Washington. In the process of designing the courseware, this framework it will enhance and overcome the problem of lack of proper guidance in delivering materials. From this it will provide an alternative development strategy for courseware designers as well producing a new learning strategy that will further motivate children and enhance their learning process.
