Abstract

Auditing is characterized by the reliance on a number of principles. These principles should help to make the audit an effective and reliable tool in support of management policies and controls, by providing information on which an organization can act in order to improve its performance (ISO 19011:2011). However, many people are put off by the word *audit* and this may be due to a lack of knowledge or awareness on the importance of audit process and findings. In this study, an exploratory approach is taken to investigate words that are used to describe the auditing process via corpus methods/techniques. A copy of the Code of Practice for Institutional Audit (COPIA) document obtained from the MQA website is built into a corpus, which is then extracted using corpus software to examine frequent words and phrases. Following this, comparison is made to a guideline document used in UiTM's quality assurance activity known as Guidelines for Integrated Audit (IQMS). Analyses of the quantitative search and particular phrases are then reflected on the particular communicative function (i.e. auditing processes). Findings are descriptive in that results are hoped to enhance further understanding of the COPIA document as well as auditing as a whole.

Keywords: Audit, COPIA, IQMS, MQA, corpus linguistics

1.0 INTRODUCTION

As structures of social order, rules are generally inherent to govern living behavior. However, rules are often mediated as to achieve conformity or compliance, also known as auditing or accounting. Power (2003: 379) argues "[t]hat accounting is more than a neutral technical practice is well established; it shapes preferences, organizational routines, and the forms of visibility, which support and give meaning to decision making". He also states that more often than not, accounting or auditing functions "to legitimate individual and organizational behaviour than to support efficient and rational decision making" (Power, 2003: 379).

Volume 8 Issue 1 2019, 1-16 e-Academia Journal (http://journale-academiauitmt.uitm.edu.my/v2/index.php/home.html) © Universiti Teknologi MARA Terengganu Auditing is essentially an inferential practice [i.e. to deduce or conclude (something) from evidence and reasoning], but Power mentions that "there are different perspectives on the nature and quality of the inference process" (2003: 388). The written document (or audit) is important as it reflects "auditor credibility, a credibility which in turn is reinforced by licensing, regulatory and accreditation systems" (Power, 2003:391). In Malaysia, like everywhere else in the world, auditing becomes a necessary practice. Despite this importance, "the role of auditing in the production of legitimacy, and the consequences of this, remain under-documented and under-researched" (Power, 2003: 392).

Corpus linguistics, which is a branch of linguistics, can be understood to mainly represent a kind of methodology to conduct linguistic analysis (Lee, 2010; Tognini-Bonelli, 2001; Zuraidah et al., 2010). In corpus linguistics, language data (i.e. collection of large texts in computers) is referred to as a *corpus*. More importantly, this corpus consists of attested data of real-world spoken/written discourse, which is then explored using computers and sophisticated software that provide linguists with rapid and rich information. Hence, corpus is argued to be a significant tool to study language among other benefits like accounting for potential generalizations to be made from large or big data findings as well as being empirical when it comes to quantifying data. It also "unites the activities of data gathering and theorizing that leads to a qualitative change in the understanding of language" (Noorzan, 2017: 6).

In the past, corpus studies have looked at many written texts (Granger, 1992; Altenberg & Granger, 2001; Breeze, 2007; Staples & Reppen, 2016). These include learner/student writing, academic writing, and student writing in class. Corpus techniques have also contributed to studies on media written texts (Baker et al., 2008; Bednarek, 2006; Habibah Ismail, 2016), translated texts (Granger, 2003; Rozaimah & Nor Hashimah, 2014), and cultural texts (Partington, 2004; Gabrielatos & Baker, 2008). However, little can be found with regard to corpus studies on other text-types not mentioned above, including auditing documents. To the best of the authors' knowledge, this paper would thus, be considered the first attempt to investigate auditing documents using corpus methods in Malaysia, at least Universiti Teknologi MARA (UiTM) in particular.

This paper aims to describe the auditing process as stipulated by the Malaysian Qualification Agency (MQA)¹ through examining one of the written documents, namely The Code of Practice for Institutional Audit (COPIA)² and then compare this to the guideline document used in UiTM quality assurance activity, i.e. iQMS (the Integrated Quality Management System). More specifically, this is a corpus linguistics study that highlights use of corpus techniques to explore how language is used, by looking at frequent words/phrases and how it occurs in context (specifically, in the audit documents). Findings from this study essentially, describe ways in which audit documents are written.

2.0 QUALITY ASSURANCE: A MALAYSIAN/ UNIVERSITI TEKNOLOGI MARA PERSPECTIVE

Quality assurance of the higher education system in Malaysia is controlled and overseen by a government agent, which is called the Malaysian Qualification Agency (henceforth, MQA). The quality assurance evaluation conducted by MQA is guided by these documents: The Malaysian Qualifications Framework (MQF), The Code of Practice for Programme Accreditation (COPPA), The Code of Practice for Institutional Audit (COPIA), and the Programme Discipline Standards and Guides to Good Practices. The work of the MQA revolves around two major approaches to ensure and maintain the quality of higher education in Malaysia. The first approach is to accredit programmes and qualifications. The second is to

Volume 8 Issue 1 2019, 1-16

 $^{^1}$ More information about MQA can be obtained from their official website: www2.mqa.gov.my/QAD/ 2 2nd edition

e-Academia Journal (http://journale-academiauitmt.uitm.edu.my/v2/index.php/home.html) © Universiti Teknologi MARA Terengganu

audit institutions or their components. The two are distinct approaches but highly interrelated (Malaysian Qualifications Agency, 2009:18).

COPIA is adapted from the Code of Practice for Quality Assurance in Public Universities of Malaysia (2005), published by the Quality Assurance Division of the Ministry of Higher Education. COPIA guides the HEP³ and the MQA in auditing higher education institutions. COPIA is dedicated to review institutions of higher learning for specific purposes through comprehensive institutional and thematic audits. The quality evaluation process covers the following nine areas: 1) Vision, mission, educational goals and learning outcomes; 2) Curriculum design and delivery; 3) Assessment of students; 4) Student selection and support services; 5) Academic staff; 6) Educational resources; 7) Programme monitoring and review; 8) Leadership, governance and administration; 9) Continual quality improvement.

UiTM, like many of the public universities in Malaysia, highly emphasizes efforts in assuring quality. Ever since 2013, UiTM has started applying a quality management system based on ISO 9001 until today. In 2008, MQA has begun instructing all public universities in Malaysia to fulfill the criteria mentioned in COPIA. UiTM has taken the initiative to comply with this new move by introducing the Integrated Quality Management System (iQMS) to all systems in UiTM in the year 2015. This system (i.e. iQMS) is to ensure all management processes of/in UiTM abide to the standards of COPIA and ISO 9001.

Apart from this, each responsible center for academic purposes (or known as PTJ)⁴ that is the Branch Campuses and Faculties will have to conduct a Self-Assessment Audit (or *Audit Kendiri*, in Malay) and in turn, produce a Self-Review Report (SRR). In order to produce a comprehensive SRR, the Institute of Quality and Knowledge Advancement (InQKA) has started the initiative to prepare a set of guidelines that integrates the two standards mentioned earlier, COPIA and ISO 9001. This guideline is what has been referred to as iQMS.

As mentioned earlier, studies have benefitted from employing corpus techniques that range from computational linguistics and forensic linguistics to the fields of language teaching and translation. With the ever-growing development and number of studies in corpus linguistics, there is more call for interdisciplinary research (Granger & Meunier, 2008; Gablasova & Brezina, 2015). One of the approaches to corpus language studies is the corpus-driven approach. While the argument between corpus-driven and corpus-based is on-going (see McEnery & Hardie, 2011 for a comprehensive summary), these approaches are similar to inductive and deductive approach – linguists must justify how they derive their data (i.e. bottom-up or top-down).⁵ Put simply, the benefit of following the corpus-driven approach is that language data is obtained with "minimal experimental interference" (Noorzan, 2017: 6) and for some theoretical reasoning to be directly produced from facts revealed by natural language (Tognini-Bonelli, 2001). The present study thus fills this gap by examining how language is used in auditing documents like COPIA and iQMS, via corpus techniques. The following section further explains how this is conducted.

3.0 MATERIALS AND METHODS

The present study follows the corpus-driven approach in which the audit written document (COPIA) is firstly downloaded from the MQA website and saved as a text file. To reiterate, COPIA is the standard MQA document while iQMS is UiTM's guidelines that integrates two standards mentioned earlier,

Volume 8 Issue 1 2019, 1-16

³ HEP here means 'Higher Education Provider'

⁴ This term is derived from the Malay term *Pusat Tanggungjawab*

⁵ Reader is advised to read Chapter 6 of Winnie Cheng's Exploring Corpus Linguistics: Language in Action (2012) for basic steps to do a corpus-driven analysis.

e-Academia Journal (http://journale-academiauitmt.uitm.edu.my/v2/index.php/home.html)

[©] Universiti Teknologi MARA Terengganu

namely COPIA and ISO 9001. The COPIA text file represents a specific (or specialized) corpus that contains of 34,287 running words.

3.1 Frequency lists

By using WordSmith tools (6.0),⁶ a wordlist is firstly extracted. Table 1 presents the top 100 words occurring in COPIA along with the frequency counts and percentages. It can be seen that several lexical items (or words) are listed, possibly describing at first glance what kinds of words are mostly used in the text (e.g. *HEP*, *standards*, *audit*, *academic*, *quality*, *student*(s), *staff*, *information*, *comment*, *panel*, *programme* etc.). These relate closely to the topic of auditing in which frequent lexical words refer or talk about the audit such as *standards*, *audit*, *quality*, *accreditation*, *auditors* and therefore, are topic-related. While *the* is not surprising to be on top of the list because of its ubiquitous occurrence in the English language (*the* is the most frequent word in English), other functional words like *and*, *of*, *to*, *on*, *in*, *for* and *provide* insight on how meaning is conveyed (particularly regarding the auditing process).

⁶ This is a computer software programme created by Mike Scott and can be purchased from http://www.lexically.net/wordsmith/version6/

For use of comparison, another specialized corpus is compiled, which is the iQMS that consists of 4,934 running words. Table 2 shows a list of frequent words for the iQMS Guideline. Interestingly, *the* is not ranked top on the list and two modal verbs (*must* and *should*) are listed among the most frequent words compared to its' occurrences in COPIA (ranked 29 and 40, respectively). Several words are also found to

Volume 8 Issue 1 2019, 1-16

e-Academia Journal (http://journale-academiauitmt.uitm.edu.my/v2/index.php/home.html)

[©] Universiti Teknologi MARA Terengganu

occur more frequent in iQMS compared to COPIA (*standards*, *academic*, *enhanced*, *assessment*), while some words were not shared in COPIA (*autonomy*, *consistent*, *adequate*, *well*). This is interesting because these lists of words firstly inform us about words used to describe auditing from two different auditing documents, and hence, their differences may suggest variances respective of their institutions and also what the two separate organizations (MQA and UiTM) believe auditing should be about.

Table 2. Wordlist for IQMS Guideline

Volume 8 Issue 1 2019, 1-16 e-Academia Journal (http://journale-academiauitmt.uitm.edu.my/v2/index.php/home.html) © Universiti Teknologi MARA Terengganu

3.2 Key words

To examine differences between the word lists in more detail, a keywords list is derived (also by using WordSmith tools). A keywords list is essential to identify words that are statistically significant in the iQMS Guideline relative to their occurrences in the COPIA text (known as key words). The key words are calculated by comparing the frequency of each word in the wordlist of a particular text (in this case shown in Table 3.2) with the frequency of the same word in the reference wordlist (Table 3.1). Key words not only inform us the 'aboutness' or content of the texts, but also stylistic key words that are not obviously indicative of what the texts are about (Culpepper, 2009). Table 3.3 presents 15 key words that are particularly more salient/less salient in the iQMS Guideline compared to in COPIA.⁷ The top fifteen words (with the largest log-likelihood values)⁸ in this study are shown in Table 3. The table shows the top fifteen frequency and relative frequency for each word in iQMS.

Ν	Key word	Freq.	%	RC. Freq.	RC. %	Keyness (log-like)
1	must	117	2.37	165	0.48	148.30

Table 3. Keywords list

Key words ranked second until sixth are unsurprising as they show words related to the audit documents, along with key words ninth and eleven [*provider*, *higher* and *education* mainly refers to *Higher Education Provider* (*HEP*)]. According to the Malaysian Qualifications Agency, HEP refers to "a body corporate, organisation or other body of persons which conducts higher education or training programmes leading to the award of a higher education qualification" (2009: ix), and this term is found to be used repeatedly in sub-headings of the iQMS (*Section 2: Guidelines on Criteria and Standards for Higher Education Provider*). The most significant difference, with keyness value of 148.30, alerts us to the use of *must* almost 5 times relatively more frequently (0.48% compared to 2.37%) in the iQMS text. *Must* generally denotes obligation (Coates, 1990) and as a modal verb, it is used to specify or add meaning to the main verb and verb phrase (Mindt, 1995). Given the overuse of *must*, it can be hypothesized that the iQMS Guideline includes more mention of obligation or necessity than COPIA. It could also suggest for the former text to be more authoritative in nature. Looking lower down the list, another modal verb is over-used in iQMS – *should* (1.38%) relative to in COPIA (0.40%), and this usually represents a sense of recommendation.

⁷ Negative key words (highlighted by the negative keyness score) are words that are under-used/particularly less frequent in iQMS compared to their occurrences in COPIA.

⁸ Key words are measured using log-likelihood with a minimum frequency of 2 words in a text.

Even though similar words (e.g. *standards*, *criteria*, *guidelines*) are highlighted to suggest what the text is about, the modal verbs *must* and *should* are particularly more interesting for further analysis. By looking at these verbs, we may be able to look at how the process of auditing is conducted, especially since "inference in the context of auditing is a matter of knowing how to go in a very specific community" (Power, 2003: 389). From this list, interesting key words are selected for further qualitative analysis by examining the co-occurring words surrounding them (also known as collocates) and concordance lines (or use in context). This is further discussed in the subsequent section.

4.0 RESULTS AND DISCUSSION

To examine use of modal verbs in COPIA and the iQMS Guideline in more detail, *must* is firstly investigated by looking at co-occurring words to the left and right of the modal verb (i.e. collocate). This normally allows for the sentence structure and meaning to be examined. For example, *assessment <u>must</u> be summative and formative*. In this example, it is highly necessary/important that assessments include summative and formative elements. Table 4 presents collocates for the modal verb *must* in both documents, with words <u>not</u> shared between the two, highlighted in bold. Interestingly, it could be seen that there are more words that co-occur with the modal *must* in the iQMS Guideline compared to in COPIA (e.g. *management, 2008, 9001, file, dan, analysis, evidences, tools, postgraduate, portfolio, training, visiting, representations, service, surat, summative, work, various, development, disciplinary, courses, course, activities, according, act, consultation, making, library, meetings, mqf, ⁹ needs, jawatankuasa, forms, files, interview). Two of these collocates are numbers referring to the year 2008, and procedures for ISO 9001, while three of them are in Malay (<i>dan*/and, *surat*/letter, *jawatankuasa*/committee). These collocates in particular are not shared in COPIA and may demonstrate clear differences between the two documents. Different collocates in COPIA on the other hand, include provider, state, selected, and developmental.

Unsurprisingly, almost all collocates are shared between the two texts as COPIA is the standard of reference for iQMS. This means that in both COPIA and iQMS, similarities are indicated by noticing aspects that are compulsory via the modal *must*. More specifically, *must* co-occur with words that mostly elicit some form of action or process (e.g. *activities, assessment, counselling, delivery, involved, methods, procedures, process, processes, programme, programmes, progression, renumeration, results, review, selection, services*); words that revolve around a body or groups of people (e.g. *education, HEP, intake, leadership, levels, staff, students, teams*); structures or places (e.g. *centre, facilities, policies, policy, provision*) and others (*criteria, goals, quality, there, these, tools*). Where spatial deictic are present (*there, these*), these refer to expressions like 'there must be' and 'these must be'.

In terms of collocates for the modal verb *should*, the same method is applied and results are presented in Table 5 below. In contrast to the previous table, collocates co-occurring with *should* are more varied in COPIA compared to in the iQMS Guideline. These collocates mainly include words referring to groups of people (*panel, auditors, they, members, liaison, their, MQA, officer, senior, staff, SRP, people*), and words that describe action (*report, made, need, able, briefed, supported, met, indicate, direct, possess, expressed, monitoring, exercise, comment, provided, read, questioning, questions, ability*). Interestingly, *provider* is found to co-occurr with *must* in COPIA [e.g. *the Higher Education Provider (HEP), must comply with these standards*], but co-occurring with *should* in iQMS (e.g. *The HEP should actively participate in socio-economic activities of the community in which it is located*).

However, upon further inspection, *provider* mainly refers to the acronym *HEP*, and in turn shows that the Higher Education Provider occurs most frequently with both modal verbs in both texts (in fact, *HEP* occurs 52 and 58 times before *must*, and 34 and 28 *times* before *should* in iQMS and COPIA, respectively). Syntactically, this results in one pattern of the use of modal verbs in relation to the lexical item, *HEP*, i.e. that the Higher Education Provider is seen to necessarily and preferably be or perform something as constructed by the phrase HEP + *must/should* x.

Table 6 presents patterns of the 'HEP + must/should' phrase occurring with one word adjacent to the right of the phrase, in both the iQMS Guideline and COPIA. As can be seen, COPIA has slightly more variety of the phrase with main verbs like *comply* and *encourage* that occur with the modal verb *must*. These

verbs were not found to co-occur with the modal verb in iQMS. Based on the concordance lines in COPIA, HEP was found essentially to comply "to standards" and "stipulated time period" when given recommendations, particularly on the maintenance of accreditation of programmes. HEP was also seen to necessarily encourage "connectivity of its staff and students with the local community around it, including through cultural, social and community service activities" as well as to essentially encourage "active linkages and continuous relationship between it and its alumni". Other words like *the* and *also* were found to co-occur with the modal verb *should* in expressing possibility, i.e. 'should the need arise' (*The* <u>HEP</u> *should follow closely the requirements found in Section 3.1 below and clarify with the MQA from time to time* <u>should the need arise</u>), and to signal passive form of recommendation in 'should also be included' (*The* <u>HEP</u> *should provide a factual description of its history, policies, procedures* [...] *Information on the processes by which decisions are made and their rationale* <u>should also be included</u>).

Table 6. HEP + must/should

The following figures (Figures 1, 2, 3, and 4) show 25 of the concordance lines for both modals in COPIA and iQMS, in more detail. This allows us to see how patterns of words are constructed in context, particularly with reference to the word *HEP* (Higher Education Provider) and modal verbs *must/should*.

1	and development in research and commercialisation. • The HEP must facilitate and provide incentives for the academic staff and the
2	and security of student and academic staff records. • The HEP must establish and disseminate policies that respect the rights of
3	into account the specific needs of each department. • The HEP must have a written and well-disseminated policy on tuition fees,
4	responsible for, the internal quality assurance system. • The HEP must encourage connectivity of its staff and students with the local
5	8.3.1 Benchmarked Standards • The administrative staff of the HEP must be appropriate and sufficient to support the implementation of
6	32 6.5 Financial Allocation 6.5.1 Benchmarked Standards • The HEP must have budgetary and procurement procedures to ensure that its
7	its objectives and maintain high standards of quality. • The HEP must have a clear line of responsibility and authority for budgeting
8	. 8.4 Academic Records 8.4.1 Benchmarked Standards • The HEP must have policies concerning the accessibility and security of
9	and suitable facilities to promote research activities. • The HEP must have a policy regarding access to information and external
10	and university colleges) 6.2.1 Benchmarked Standards • The HEP must have a policy and planning that identifies the priorities, 31
11	advancement for its administrative and management staff. • The HEP must conduct regular performance review of its administrative and
12	support academic programmes and research activities. • The HEP must provide adequate and suitable facilities to promote research
13	HEP must be consistent with its statement of purpose. • The HEP must clarify its governance structures and functions, and the
14	with the changes and best practices in quality assurance. • The HEP must have dynamic mechanisms to implement recommendations for
15	and comply with the programme discipline standards. • The HEP must have an adequate number of full-time academic staff for each
16	activities. 26 4.6 Alumni 4.6.1 Benchmarked Standards • The HEP must encourage active linkages and continuous relationship between
17	in HEPs which have geographically separated campuses. • The HEP must have a department or unit dedicated to, and responsible for,
18	good management and deployment of the resources. • The HEP must have mechanisms for training and career advancement for its
19	Benchmarked Standards • The policies and practices of the HEP must be consistent with its statement of purpose. • The HEP must
20	, accountability and authority. • The governing board of the HEP must be an active policy-making body with an adequate degree of
21	Monitoring and Review 7.1.1 Benchmarked Standards • The HEP must have a policy on the reviewing, monitoring and evaluation of all
22	educational goals consistent with its vision and mission. • The HEP must define the specific competencies that students should
23	regional and global levels. 2.4.1 Benchmarked Standards • The HEP must have linkages with all external stakeholders at the local,
24	of the MQF, the review must involve external examiners.) • The HEP must provide a conducive learning environment for its students in
25	Methods 2.1.1 Benchmarked Standards • The HEP must have a clearly defined process to establish, review and

Figure 4. HEP + *should* in iQMS

Based on these figures, the modal verb *must* stresses that it is necessary or even mandatory for certain situations to take place or be in order. For example, [t]*he teaching and learning <u>activities must be</u> <u>consistent</u> with the curriculum and physical <u>facilities must comply</u> with the relevant laws. If they are not complied, then a non-conformance is said to be given. Non-conformances are particularly problematic and would lead to difficulties for the education system at large. Words that occur with <i>should* on the other hand, highlights the good or excellent qualities that may be evident because it will add value or advance action, which may contribute to the continual improvement of a system. Examples include [t]*he physical learning <u>environment should be periodically reviewed</u> and [t]<i>he <u>HEP should embrace the spirit</u> of continual quality.*

Besides that, it is important to note that similar words that are found to occur with both modal verbs such as *counseling*, *facilities*, *goals* and *HEP* signal variations, pragmatically. The focus of these items differs depending on their importance, for example, if *facilities* occur with the modal verb *must*, it would be something that is related to the notion of law-abiding and health or well-being (e.g. *physical facilities must comply with the relevant laws, and with health*). If this is the case, items are compulsory or mandatory to be fulfilled. In contrast, when *facilities occur with should*, it suggests that a particular thing or event is recommendable (e.g. *The facilities should be user friendly to those with special needs*). In this case, it would be optional that facilities are provided for special needs students even though there may only be a number of them. This would be highly praised if such facilities are accessible.

5.0 CONCLUSION

This study has mainly investigated written texts from the MQA website and UiTM to discover how language is used to describe auditing documents in Malaysia. The paper has demonstrated how this is achieved by using corpus techniques (mainly, frequency counts, co-occurring words and key words in context). More specifically, the Guideline for iQMS in UiTM is compared to the generic COPIA standard by the MQA. Findings have shown that certain words are particularly more salient in the former such as use of modal verbs *must* and *should*. Further examination reveals that these modal verbs occur specifically to words that denote the education or academic context (HEP) and therefore, resonates with Power (2003) suggesting that

even though the actual conduct of auditing practice predictably does not conform to the blueprint, idealizations, definitions and concepts are constantly invoked to give structure to practice, to provide frames of meaning for practitioners and crucially, to provide the idiom through which practice is written up and represented to the outside world (392).

In other words, lexical items that represent the audit written document are highly contextualized. Meanings are formed to describe the structure or process of systems occurring in a particular academic institution, in this case UiTM as the Higher Education Provider. Although *must* and *should* appear with similar lexical items interchangeably, these convey different meanings and therefore, would result to different actions to take place. For example, non-compliance to items or situations that are mandatory, as denoted by use of *must*, will eventually result in major problems for the institution, while recommendations are signaled by the use of modal verb *should*. Findings also indicate that phrase constructs like HEP + *must/should* + x are possibly stylistic of the text-type, expressing directives. Despite similarities of language used in both documents, COPIA further asserts that HEP must *comply* to standards and stipulated time when responding to recommendations as well as to necessarily *encourage* healthy relationships between staff, students and alumni. Possible studies in the future include proposing for a framework on writing audit instructions and investigating how these guidelines are materialized or

demonstrated in real practice. Genre studies might also be an interesting area for further research into the typical ways of writing an audit document (e.g. report or guidelines).
